Guide to Linux Networking and Security Nicholas Wells 2003 Guide to Linux Networking and Security is a hands-on, practical guide that can be used to master Linux networking and security, in preparation for the Linux certification exams from SAIR/GNU and LPI. This book begins by introducing networking technologies and protocols, then moves into configuring a Linux network using a variety of command line and graphical utilities. Specific protocols and applications are covered in the networking chapters, including the r-utilities, NFS, Samba, and FTP, plus business-critical services such as e-mail, Web, and DNS. The second half of this book includes a discussion of security in the context of protecting business assets and user privacy, with emphasis on system administrator ethics. Cryptography and encrypted protocols lay a foundation for discussion of specific Linux security tools, including PAM, sudo, and GPG. User, file, and network security are covered. The network security discussion includes firewalls, VPNs, and utilities such as nmap, ethereal, and the SAINT profiling tool. Throughout, the book provides examples of sample commands and output, plus screen shots of related graphical utilities.

Sair Linux/Gnu System Administration Exam Cram Tim Gibbs 2001-04-01 Highly valuable test preparation book written in the proven Exam Cram style provides network professionals with the essential tools to pass the Sair/GNU Linux Level I System Administration Exam (3X0-102). This exam can satisfy the requirement for the Linux Certified Professional (LCP) designation and is also one of the four required exams to complete the higher level Linux Certified Administrator (LCA) program. Critical exam topics are covered including file system structure, adding and removing users, file permissions, moving from DOS/WIN to Linux, archiving utilities, processes management, and backup applications. Readers can also round out their exam preparation with insightful test taking strategies, hints and tips, and realistic practice questions.

*Making Linux Work* Arman Danesh 2002 Making Linux Work is the perfect desktop reference for the system administrator who has limited experience with Red Hat Linux and/or UNIX-based operating systems in general. Each section of the book begins with a fast-paced, 5-10 page overview of a specific topic that is followed directly by a collection of expertly categorized, thoroughly indexed tips and techniques. Tips are presented in a unique question-and-answer format, allowing even new Linux users to locate mission-critical information "on demand," drill down to essential details quickly, and make Linux work. Written by a SAIR Linux and GNU Certified Administrator, this invaluable reference contains everything needed to achieve proficiency in system installation; management of files, directories and disks; use and configuration of the Linux X Window System environment; and more! Its unique format is further guaranteed to increase the productivity of beginning through intermediate Red Hat Linux users by eliminating the need to wade through dense prose, extrapolate information from cookbook-style tutorials, struggle through complex tech docs, or engage in time-intensive, trial-and-error experimentation.

**SAIR Linux & GNU Certified Administrator** Arman Danesh 2001 A comprehensive resource for the four SAIR Linux and GNU certified administrator exams. The included CD-ROM expedites study and research, each chapter tests the reader's understanding of exam objectives, and there is virtual study group software for online collaborative study.

*Linux Networking Clearly Explained* Bryan Pfaffenberger 2001-06-22 Passionately democratic in its advocacy of networking for the masses, this is the first book on Linux networking written especially for the novice user. Because the free, open-source Linux operating system is winning so many converts today, the number of Linux-based networks will grow exponentially over the next few years. Taking up where *Linux Clearly Explained* left off, *Linux Networking Clearly Explained* walks the reader through the creation of a TCP/IP-based, Linux-driven local area network, beginning with a "sandbox" installation involving just two or three computers. Readers master the fundamentals of system and network administration—including handling user accounts and setting up security—in this less complex environment. The author then helps them along to the more sophisticated techniques associated with connecting this network to the Internet. \* Focuses on the 20% of Linux networking knowledge that satisfies 80% of network needs—including the needs of small businesses, workgroups within enterprises and high-tech homes. \* Teaches novices to implement DNS servers, network information services (NIS), network file systems (NFS), and all of the most important TCP/IP services, including email, Web and newsgroup access. \* Explains how to set up AppleTalk and Windows NT domain servers for networks that include Macintosh or Windows systems. \* Comes with a CD containing the latest version of Red Hat Linux, as well as additional freeware/shareware Linux tools and network management applications.
