Merely said, the Richard Archbold And The Archbold Biological Station is universally compatible with any devices to read

*CRC World Dictionary of Palms* Umberto Quattrocchi 2017-08-03 From the Foreword Umberto Quattrocchi has brought us some amazing and useful works through the various dictionaries that he has compiled. This time it is for two very important plant families the palms and the cycads that are synthesized here in these two volumes. Each entry is fascinating not just for the botany and full nomenclature of the plant species but for all the associated uses, folklore and interactions with other organisms. ...These entries are fascinating glimpses of natural history. ... Botanists, conservationists, ethnobotanists, anthropologists, geographers, bird watchers, naturalists, historians and those of many other disciplines will find these volumes a most valuable and useful resource. It is the sort of book that will be in frequent use in my library. ----- Professor Sir Ghilleen Prance FRS, VMH, Former Director, Royal Botanic Gardens, Kew Following the same format as Umberto Quattrocchi's highly praised and well-used previous works, *The CRC World Dictionary of Palms: Common Names, Scientific Names, Eponyms, Synonyms, and Etymology* brings together the vast and scattered literature on palms and cycads to provide better access to information on these economically important plants. Each genus and species has a detailed morphological description and includes a list of synonyms and vernacular names in many

languages. Bibliographies accompany each entry which are comprehensive, up-to-date and multi-lingual. The detailed information for every entry on habitats, economic uses, historical and biographical data, botanical exploration, and linguistics will be useful for any library involved with botany, herbal medicine, pharmacognosy, medicinal and natural product chemistry, ecology, ethnobotany, systematics, general plant science, agriculture or horticulture. Umberto Quattrocchi is the author of the bestselling *CRC World Dictionary of Plant Names*, winner of the prestigious Hanbury Botanical Garden Award. His most recent multi-volume work, *CRC World Dictionary of Medicinal and Poisonous Plants*, received strong praise as being "... an unparalleled starting place—a tool of first resort for any thoughtful researcher. Quattrocchi and CRC have delivered a dictionary like no other, a learned finger pointing in the right direction." —John de la Parra, Northeastern University, Boston, Massachusetts, USA, from *Economic Botany*, Vol. 68, 2014

*Forces of Nature* Clay Henderson 2022-11-26 Florida Historical Society Stetson Kennedy Award The activists and victories that made Florida a leader in land preservation Despite Florida's important place at the beginning of the American conservation movement and its notable successes in the fight against environmental damage, the full story of land conservation in the state has not yet been told.

In this comprehensive history, Clay Henderson celebrates the individuals and organizations who made the Sunshine State a leader in state-funded conservation and land preservation. Starting with early naturalists like William Bartram and John Muir who inspired the movement to create national parks and protect the country's wilderness, *Forces of Nature* describes the efforts of familiar heroes like Marjory Stoneman Douglas and May Mann Jennings and introduces lesser-known champions like Frank Chapman, who helped convince Theodore Roosevelt to establish Pelican Island as the first national wildlife refuge in the United States. Henderson details how many of Florida's activists, artists, philanthropists, and politicians have worked to designate threatened land for use as parks, preserves, and other conservation areas. Drawing on historical sources, interviews, and his own long career in environmental law, Henderson recounts the many small victories over time that helped Florida create several units of the national park system, nearly thirty national wildlife refuges, and one of the best state park systems in the country. *Forces of Nature* will motivate readers to join in defending Florida's natural wonders.

*Biographical Dictionary of American and Canadian Naturalists and Environmentalists*  
George A. Cevalco 1997-12-09 Casting a wide net, this volume provides personal and professional information on some 445 American and Canadian naturalists and environmentalists, who lived from the late 15th century to the late 20th century. It includes explorers who published works on the natural history of North America, conservationists, ecologists, environmentalists, wildlife management specialists, park planners, national park administrators, zoologists, botanists, natural historians, geographers, geologists, academics, museum scientists and administrators, military personnel, travellers, government officials, political figures and writers and artists concerned with the environment. Some of the subjects are well known. The accomplishments of others are little known. Each entry contains a succinct but careful evaluation of the subject's career and contributions. Entries also include up-to-date bibliographies and information

concerning manuscript sources.

*Bibliography of the North American Land Tortoises (genus Gopherus)* John F. Douglass 1975 Land tortoises of the genus *Gopherus* are an important element in the fauna of southern North America. Information on the four living species is widely scattered in various popular and scientific books and periodicals. An extensive search was made for literature on behavior and ecology of tortoises in this group. This compilation is intended as an aid to herpetologists and conservationists interested in these animals; it is hoped that it will serve as a directory to available information, prevent unnecessary duplication of effort, and help illuminate research needs. Each numbered item in the bibliography has been read and its contents indexed by subject. The references cited in each article have also been checked. A copy of each paper listed is on file in the Library of Archibold Biological Station.

**Boardwalks and Long Walks** William Holcomb 2014-05-27 A guide for the beginning citizen-scientist, and for anyone looking for the hidden natural areas of Florida. A backpack friendly, field ready listing that is not web dependent. It includes the story of the search for the elevated hiking trails called boardwalks. The "Long Walks" are the primitive paths and longer trails found in the public lands. This book includes a list of the Public Access Lands in Florida of nearly 1,000 sites in all; City Parks and Preserves, County Parks and Preserves, Wildlife Management Areas, Wildlife Environmental Areas, State Parks, State Forests, Conservation Areas of Water Management Districts, National Parks, National Forests, Nature Centers, Indian Mound Sites, and Private Preserves/Conservation Areas. There are chapters on Florida's habitats, trees, Florida's water cycle, and historic figures and place names.

**Whispers in the Pines** Joanna Burger 2006 In this book, naturalist Joanna Burger takes us on a series of delightful trips through the Pine Barrens. From the Albany Pine Bush, the Long Island Barrens, and the New Jersey Pine Barrens in the Northeast, to the pinelands of South Carolina and Florida, Burger describes in lively detail how these habitats have come to harbor such a unique assemblage of species. She introduces us to amphibians and reptiles,

neotropical migrants and other birds, and a range of common and unusual mammals. Burger also traces the regions' historic and geologic backgrounds, and the impact of human occupation from the time of the paleo-Indians to the present. She revisits the tension between development and preservation, reminding us that a healthy pine barren region requires uninterrupted land and rejuvenating fires, both of which are increasingly jeopardized. *Whispers in the Pines* is essential reading for everyone concerned with the history and preservation of these unique landscapes and their wildlife.

*CRC World Dictionary of Plant Names* Umberto Quattrocchi 2017-11-22 A reference covering over 22,000 genre of plants and thousands of species. Included are the botanical names, synonyms, homonyms, and the vernacular and trade names of the commonly accepted generic names.

*New Guinea* Bruce M. Beehler 2020-05-19 An enthralling exploration of the biologically richest island on Earth, featuring more than 200 spectacular color images by award-winning National Geographic photographer Tim Laman. In this beautiful book, Bruce Beehler, a renowned author and expert on New Guinea, and award-winning National Geographic photographer Tim Laman take the reader on an unforgettable journey through the natural and cultural wonders of the world's grandest island. Skillfully combining a wealth of information, a descriptive and story-filled narrative, and more than 200 stunning color photographs, the book unlocks New Guinea's remarkable secrets like never before. Lying between the Equator and Australia's north coast, and surrounded by the richest coral reefs on Earth, New Guinea is the world's largest, highest, and most environmentally complex tropical island—home to rainforests with showy rhododendrons, strange and colorful orchids, tree-kangaroos, spiny anteaters, ingenious bowerbirds, and spectacular birds of paradise. New Guinea is also home to more than a thousand traditional human societies, each with its own language and lifestyle, and many of these tribes still live in isolated villages and serve as stewards of the rainforests they inhabit. Accessible and authoritative, *New Guinea* provides a comprehensive introduction to the island's

environment, animals, plants, and traditional rainforest cultures. Individual chapters cover the island's history of exploration; geology; climate and weather; biogeography; plantlife; insects, spiders, and other invertebrates; freshwater fishes; snakes, lizards, and frogs; birdlife; mammals; paleontology; paleoanthropology; cultural and linguistic diversity; surrounding islands and reefs; the pristine forest of the Foja Mountains; village life; and future sustainability. Complete with informative illustrations and a large, detailed map, *New Guinea* offers an enchanting account of the island's unequalled natural and cultural treasures.

### **Ornithology, Evolution, and Philosophy**

*Jürgen Haffer* 2007-11-19 This book is the first detailed biography of Ernst Mayr. He was an 'architect' of the Synthetic Theory of Evolution, and the greatest evolutionary biologist since Charles Darwin. He is one of the most widely known biologists of the 20th century.

*Sedge Moths of North America* John B. Heppner 2019-03-13 Represents the first comprehensive study of these moths in North America north of Mexico using modern systematic procedures involving assessment of a number of morphological and biological characters in relation to their phylogenetic status. This study also represents a worldwide generic study made in conjunction with the revision of the North American species, primarily to ascertain realistic generic limits and the placement of the various genera once included in the heterogeneous concept of the family. Extralimital genera are noted in a catalog of generic names associated with the Glyphipterigidae.

*Tiger Moths and Woolly Bears* William E. Conner 2009 Moths of the family Arctiidae, with their brilliant coloration, spectacular courtship rituals, and bizarre defenses, are wonders of the natural world. Unpalatable by virtue of secondary chemicals acquired from their hostplants, these moths advertise their defenses by their coloration and often mimic butterflies, wasps, bees, stinkbugs, and even cockroaches. They have ears with which they hear the echolocation of bats, and some answer with

aposematic warnings, while some may jam the bats' sonar. This book, the first written on this fascinating group, documents how tiger moths and woolly bears—the adults and larvae of the Arctiidae—flourish in a world rife with predators, parasites, and competitors. The contributing authors' accounts, each written by a recognized expert in the field, weave together seminal studies on phylogeny and behavior, natural history, chemical communication, mate choice and sexual selection, chemical ecology, parasite-host relationships, self medication, animal orientation, predator-prey interactions, mimicry, adaptive coloration, speciation, biodiversity, and more.

**A Wing and a Prayer** Anders Gyllenhaal 2023-04-18 A captivating drama from the frontlines of the race to save birds set against the devastating loss of one third of the avian population. Three years ago, headlines delivered shocking news: nearly three billion birds in North America have vanished over the past fifty years. No species has been spared, from the most delicate jeweled hummingbirds to scrappy black crows, from a rainbow of warblers to common birds such as owls and sparrows. In a desperate race against time, scientists, conservationists, birders, wildlife officers, and philanthropists are scrambling to halt the collapse of species with bold, experimental, and sometimes risky rescue missions. High in the mountains of Hawaii, biologists are about to release clouds of laboratory-bred mosquitos in a last-ditch attempt to save Hawaii's remaining native forest birds. In Central Florida, researchers have found a way to hatch Florida Grasshopper Sparrows in captivity to rebuild a species down to its last two dozen birds. In the Sierra Nevada Mountains, a team is using artificial intelligence to save the California Spotted Owl. In North Carolina, a scientist is experimenting with genomics borrowed from human medicine to bring the long-extinct Passenger Pigeon back to life. For the past year, veteran journalists Anders and Beverly Gyllenhaal traveled more than 25,000 miles across the Americas, chronicling costly experiments, contentious politics, and new technologies to save our beloved birds from the brink of extinction. Through this compelling drama, *A Wing and a Prayer* offers hope and an

urgent call to action: Birds are dying at an unprecedented pace. But there are encouraging breakthroughs across the hemisphere and still time to change course, if we act quickly.

*Avian Ecology and Conservation in an Urbanizing World* John M. Marzluff 2012-12-06 One of the most striking and persistent ways humans dominate Earth is by changing land-cover as we settle a region. Much of our ecological understanding about this process comes from studies of birds, yet the existing literature is scattered, mostly decades old, and rarely synthesized or standardized. The twenty-seven contributions authored by leaders in the fields of avian and urban ecology present a unique summary of current research on birds in settled environments ranging from wildlands to exurban, rural to urban. Ecologists, land managers, wildlife managers, evolutionary ecologists, urban planners, landscape architects, and conservation biologists will find our information useful because we address the conservation and evolutionary implications of urban life from an ecological and planning perspective. Graduate students in these fields also will find the volume to be a useful summary and synthesis of current research, extant literature, and prescriptions for future work. All interested in human-driven land-cover changes will benefit from a perusal of this book because we present high altitude photographs of each study area.

*Arthropod Venoms* S. Bettini 2013-03-13 Arthropod venoms have received much attention and have played an important role in folklore and medicine since ancient times. Scorpion envenomation, "tarantism," bee and wasp stings are among those subjects about which most has been speculated and written in the past. In the last 50 years or so, a great number of scientific papers have been devoted to arthropod venoms, but only a few volumes have been designed to collect this rapidly increasing material, and these are not recent. Of late, the chemistry and mode of action of several arthropod venoms have been thoroughly studied, and some of these substances will probably be used as pharmacological tools and also as therapeutic agents. The aim of the present volume is to collect in manual form new information as well as the old notions on arthropod venoms. Even

though it was our intention to present a volume on arthropod venoms, and not on venomous arthropods, inevitably we were forced to include information on venom-producing organisms as well. We assumed, in fact, that those scientists for whom the present manual is primarily intended (biochemists, particularly comparative biochemists, and pharmacologists) should be familiar with the biologic elements concerning the venom-producing species; which should show them how important it is to operate in close collaboration with biologists specialized in venomous arthropod systematics and biology.

**Entanglements** Tora Johnson 2007-09-23

Entanglements explores the clash of cultures and personalities among fishermen, scientists, and whale advocates struggling to save both the endangered North Atlantic right whale and the livelihoods of thousands of Atlantic coastal families. By most counts, about 300 of these whales remain in the North Atlantic, and scientists warn that collisions with fishing gear are contributing to their decline. The political climate that surrounds the world's most endangered large whale is contentious, complex, and heartrending. Without pointing fingers or laying blame, Tora Johnson explores every side of the issue. She takes us to sea with fishermen who struggle to stay in business, setting traps and gillnets in the whale's habitat, and with members of the rescue teams who attempt to cut away deadly rope and net from whales in the wild. Weaving their stories and her personal observations into a discussion of the science and history of the conflict, she offers an admirable balance of perceptions, backgrounds, and agendas. Her thoughtful discussion of the plight of fishermen and whales and of the frustrations between fishing communities and conservationists presents an authentic microcosm of the global conflict between human demands on the environment and nature's finite capacity for supporting those demands.

*Deep Sea Explorer* Rick Archbold 1994 Traces the life of the underwater explorer who located

the wreck of the Titanic, and developed underwater robots for safer exploration of the deep.

Tahoe Tales of Bygone Days and Memorable Pioneers Don Lane 2004-11-24 The manuscript is a collection of short stories that were originally prepared as part of a radio program that began in the early 1980's as a summer informational and educational program for Tahoe area residents and tourists. Between 1982 and 1985 the author presented more than one hundred radio tales about Tahoe's history and the environment over Tahoe radio station KTHO AM-590. Lane returned to the radio airways in 1995, this time with radio station KOWL AM-1490, and has since broadcast more than two thousand tales ("Don Lane's Tales of Tahoe"). The manuscript is a distinctive mixture of stories about the events, large and small, that shaped and changed the region, and simple stories about the people that once lived in our region during the past 150-years. Stories about pioneer men and women, gold-seekers and adventurers. Tales about the unique characters; the famous like the Donner's, Mark Twain, John Sutter and James Marshall, and John Fremont, along with the powerful and the forgotten. The manuscript weaves serious history with light-hearted tales with a minimum of editorializing, as the emphasis has been on maintaining historical integrity and authenticity. The stories, gathered from old journals, archives and historical records are both entertaining, and educational. And hopefully too, this manuscript will contribute to an increased awareness of our regional history and a greater appreciation for those people that have been lost inside the pages of history.

**An Explorer's Notebook** Tim Flannery 2014-02-04 An invaluable collection of think pieces from a climate change expert and the author of the #1 international bestseller *The Weather Makers*. Tim Flannery is one of the world's most influential scientists, a foremost expert on climate change credited with discovering more species than Charles Darwin. But Flannery didn't come to his knowledge overnight. With its selection of exhilarating essays and articles written over the past twenty-five years, *An Explorer's Notebook* charts the

evolution of a young scientist doing fieldwork in remote locations to the major thinker who has changed the way we think about global warming. In over thirty pieces, Flannery writes about his journeys in the jungles of New Guinea and Indonesia, about the extraordinary people he met and the species he discovered. He writes about matters as wide-ranging as love, insects, population, water, and the stresses we put on the environment. He shows us how we can better predict our future by understanding the profound history of life on Earth. And he chronicles the seismic shift in the world's attitude toward climate change. An Explorer's Notebook is classic Flannery—wide-ranging, eye-opening science, conveyed with richly detailed storytelling. "Tim Flannery is in the league of all-time great explorers like Dr. David Livingstone." —Sir David Attenborough

**For Love of Insects** Thomas Eisner 2005 The authors seek to understand how insects and other arthropods use chemicals to defend themselves against predators and how some predators succeed in eating them anyway.

**Florida Wildlife Corridor Expedition** Carlton Ward 2013-03-01 "The Florida Wildlife Corridor Expedition shows the world that beyond beaches and theme parks, the heart of Florida is still wild--and can still be saved. In 2012, four explorers enter the Everglades and, 100 days later, reach the Okefenokee Swamp in southern Georgia. They paddle, peddle and hike more than 1,000 miles up the spine of Florida to call attention to this remaining natural corridor so essential to the survival of wildlife and to the well-being of Florida's ever-growing population. Stunning photographs by Carlton Ward Jr and essays by fellow explorers bring the story to life in vivid detail. Travel with them to discover the rivers, swamps, prairies, springs and forests, along with private cattle ranches and timberlands, which unite to form the corridor. Learn about wide-ranging wildlife like the Florida black bear and Florida panther and meet the gladesmen, cowboys and other heroes who work to protect the corridor for us all. The Florida Wildlife Corridor project is a collaborative vision to connect remaining natural

lands, waters, working farms and ranches from the Everglades to Georgia, protecting a functional ecological corridor for the health of people and wildlife. The Florida Wildlife Corridor Expedition, led by photographer Carlton Ward Jr, biologist Joe Guthrie, conservationist Mallory Lykes Dimmitt and filmmaker Elam Stoltzfus, was a 100 day, 1000 mile trek in early 2012 that explored the last remaining natural path through the length of the Florida peninsula. The journey will be featured in a film to debut nationally on Public Television in April, 2013" -- Amazon.com. *Bitten* Andrew Furman 2014-04-15 When Andrew Furman left the rolling hills of Pennsylvania behind for a new job in Florida, he feared the worst. While he'd heard much of the fabled "southern charm," he wondered what could possibly be charming about fist-sized mosquitoes, oppressive humidity, and ever-lurking alligators. It wasn't long before he began to notice that the real Florida right outside his office window was very different from the stereotypes portrayed in movies, television, and even state-promoted tourism advertisements. In *Bitten*, Furman shares his amazement at the beautiful and the bizarre of his adopted state. Over seventeen years, he and his family have shed their Yankee sensibilities and awakened to the terra incognita of their new home. As he learns to fish for snook—a wily fish that inhabits, among other areas, the concrete-lined canals that crisscross the state—and seeks out the state's oldest live oak, a behemoth that pre-dates Columbus, Furman realizes that falling in love with Florida is a fun and sometimes humbling process of discovery. Each chapter highlights a fascinating aspect of his journey into the natural environment he once avoided, from snail kites to lizards and cassia to coontie. Sharing his attempts at night fishing, growing native plants, birding, and hiking the Everglades, Furman will inspire you to explore the real Florida. And, if you aren't lucky enough to reside in the Sunshine State, he'll at least convince you to unplug for an hour or two and enjoy the natural beauty of wherever it is you call home.

**Super Fly** Jonathan Balcombe 2021-05-25 Winner of the National Outdoor Book Award for Natural History and a New York Times Editors Choice Pick "After reading Super Fly, you will never take a fly for granted again. Thank you,

Jonathan Balcombe, for reminding us of the infinite marvels of everyday creatures." —Sy Montgomery, Author of *How to Be a Good Creature* From an expert in animal consciousness, a book that will turn the fly on the wall into the elephant in the room. For most of us, the only thing we know about flies is that they're annoying, and our usual reaction is to try to kill them. In *Super Fly*, the myth-busting biologist Jonathan Balcombe shows the order Diptera in all of its diversity, illustrating the essential role that flies play in every ecosystem in the world as pollinators, waste-disposers, predators, and food source; and how flies continue to reshape our understanding of evolution. Along the way, he reintroduces us to familiar foes like the fruit fly and mosquito, and gives us the chance to meet their lesser-known cousins like the Petroleum Fly (the only animal in the world that breeds in crude oil) and the Chocolate Midge (the sole pollinator of the Cacao tree). No matter your outlook on our tiny buzzing neighbors, *Super Fly* will change the way you look at flies forever. Jonathan Balcombe is the author of four books on animal sentience, including the New York Times bestselling *What A Fish Knows*, which was nominated for the PEN/E.O. Wilson Award for Science Writing. He has worked for years as a researcher and educator with the Humane society to show us the consciousness of other creatures, and here he takes us to the farthest reaches of the animal kingdom.

Florida Scientist 2000

Richard Archbold and the Archbold Biological Station Roger A. Morse 2000 "The story of a remarkable man who yearned to be an explorer . . . and for a change had the wherewithal to realize his ambitions."--Dean Amadon, curator (ret.), American Museum of Natural History "There was an ocean that no one had ever flown before--he flew it. There was a vast jungle that no white man had ever entered--he explored it. Yet few people have ever heard of Richard Archbold."--Lowell Thomas, 1940 The legend of Richard Archbold (1907-1976), one of Florida's most prominent biologists, began in the remote jungles of Madagascar and New Guinea, journeys recorded in the pages of *National Geographic* and the *Saturday Evening Post* in the 1920s and 1930s. Under the auspices of the

American Museum of Natural History, Archbold financed and led scientific expeditions to unexplored regions of the world, mapping them and using aircraft for the first time to supply field staff. Because of the impending Second World War, he agreed to find for the Australians a westward air route to Great Britain across the Indian Ocean and Africa. He left San Diego for New Guinea in the summer of 1938 and arrived in New York during the 1939 World's Fair, becoming the first man to circumnavigate the earth at its widest point and receiving a hero's welcome. When war halted his overseas explorations, Archbold founded in 1941 what has become one of the premier centers in the world for biological research. The 5,000-acre estate, Archbold Biological Station near Lake Placid, Florida, covers one of the most scientifically unique and threatened ecosystems in the world, the Florida Scrub. Archbold's initial enthusiasm for the scrub and his dedication to research there has been fully vindicated: the station now supports 19 federally listed threatened and endangered species, including 13 endemic plants. Recognized as one of the most superbly appointed field sites in North America, it houses impressive bird, insect, plant, and vertebrate collections. During his lifetime, Archbold hosted many of the world's leading biologists and ecologists, but his greatest legacy is his endowment: it provides support for the facility and for the vast and expanding lineage of students, researchers, and faculty, all involved in ecological research. His story, told here with affection and great esteem, is that of a philanthropist whose life bears witness to his dreams. Roger Morse, retired professor of apiculture at Cornell University, is the author of many books, including *Making Mead* (Honey Wine): History, Recipes, Methods and Equipment, and the editor of *Honey Bee Pests, Predators and Diseases*. During almost every one of the past 40 years he has spent many weeks doing research at the Archbold Biological Station.

**Endangered and Threatened Animals of Florida and Their Habitats** Chris Scott 2004 "This fully illustrated book is a comprehensive, yet convenient and easy-to-understand guide to Florida's endangered and threatened animals and the habitats that support them. Chris Scott

covers all 71 species, subspecies, or populations of mammals, birds, reptiles, fish, crustaceans, insects, corals, and mollusks. His species accounts describe each animal's listed status, identifying characteristics, historical and current distribution, biology, current threats, and conservation efforts.

**Day Trips® from Tampa Bay** Anne Anderson 2012-09-04 Getaway Ideas for the Local Traveler Rediscover the simple pleasures of a day trip with this fun and friendly guide. For local travelers seeking new adventures in their own backyards as well as for vacationers looking to experience all the excitement the area has to offer, each Day Trips® guide offers hundreds of activities to do, sights to see, and secrets to discover within a two- to three-hour drive and a route map for each itinerary. Complete with full trip-planning information including where to go, what to see, where to eat, where to shop as well as where to stay options for those who want to extend their Day Trip into a weekend. In Spring 2012 we are proud to be publishing six all new guides—The Carolinas, New Jersey, Philadelphia, St. Louis, Tampa and St.

Petersburg, and the Twin Cities—as well as an updated edition of Day Trips from Kansas City. **Ants of Florida** Mark Deyrup 2016-10-14 Ants are familiar to every naturalist, ecologist, entomologist, and pest control operator. The identification of the 233 species of Florida ants is technically difficult, and information on Florida ants is dispersed among hundreds of technical journal articles. This book uses detailed and beautiful scientific drawings for convenient identification. To most Florida biologists ants are currently the most inaccessible group of conspicuous and intrusive insects. This book solves the twin problems of ant identification and the extraordinary fragmentation of natural history information about Florida ants.

**The Florida Scrub Jay (MPB-20), Volume 20** Glen Everett Woolfenden 2020-03-31 Florida Scrub Jays are an excellent example of a cooperative-breeding species, in which adult birds often help raise offspring not their own. For more than a

decade Glen E. Woolfenden and John W. Fitzpatrick studied a marked population of these birds in an attempt to establish a demographic base for understanding the phenomenon of "helping at the nest." By studying both population biology and behavior, the authors found that habitat restraints, rather than kin selection, are the main source of the behavior of Florida Scrub Jays: the goal of increasing the number of close relatives other than descendants in future generations is of relatively minor importance in their cooperative-breeding behavior. The Florida Scrub Jay lives only in the Florida oak scrub. All acceptable habitat is constantly filled with breeders. Each year about half of the pairs are assisted by one to several nonbreeding helpers. This book provides extensive data on fecundity, survivorship, relatedness, and dispersal to establish the demographic milieu and to address questions arising out of observed helping behavior--whom, how, when, and why the helpers help.

**Foundations of Animal Behavior** Animal Behavior Society 1996-08 Beginning with Darwin's work in the 1870s, *Foundations of Animal Behavior* selects the most important works from the discipline's first hundred years—forty-four classic papers—and presents them in facsimile, tracing the development of the field. These papers are classics because they either founded a line of investigation, established a basic method, or provided a new approach to an important research question. The papers are divided into six sections, each introduced by prominent researchers. Sections one and two cover the origins and history of the field and the emergence of basic methods and approaches. They provide a background for sections three through six, which focus on development and learning; neural and hormonal mechanisms of behavior; sensory processes, orientation, and communication; and the evolution of behavior. This outstanding collection will serve as the basis for undergraduate and graduate seminars and as a reference for researchers in animal behavior, whether they focus on ethology, behavioral ecology, comparative psychology, or anthropology.
