Norie's Nautical Tables John William Norie 2007-01-01 This famous set of mathematical tables was first published in 1803. It has been a bestseller ever since, and despite developments in electronic navigation it remains an essential requirement for anyone learning and practising astro-navigation. Last updated in 1994, the editor, George Blance, has worked for some time on the modernisation of all the tables for this major new edition. New tables have been included and obsolete ones deleted to conform with the changing techniques of navigation, with the aim of improving the accuracy of the calculated position and reducing the tedium of the calculation. All the tables required for coastal and deep sea navigation are included. A simple uniform method of interpolation for all the trigonometrical tables is used. Certain tables

and data are also included which are not readily available on board ship or are only used in the examination room. The section 'Seaports of the World' has also been extensively updated and restructured with several hundred additional ports. The ports are listed geographically in the following order from Arctic Russia, Scandinavia, the Baltic Sea, the Atlantic coast of Europe, the Mediterranean Sea, West Africa, East Africa, Arabia, the Persian Gulf, the Indian sub-continent, the Far East, Australasia, the west coast of North and South America and finally the east coast of North and South America. At the back of the section is an index of the seaports.

The Poems of Basil Bunting Basil Bunting 2016-06-14 Basil Bunting's work was published haphazardly throughout most of his life, and in many cases he did not oversee publication. This is the first critical edition of the complete poems, and offers an accurate text with variants from all printed sources. Don Share annotates Bunting's often complex and allusive verse, with much

illuminating quotation from his prose writings, interviews and correspondence. He also examines Bunting's use of sources (including Persian literature and classical mythology), and explores the Northumbrian roots of Bunting's poetic vocabulary and use of dialect.

Modern Up-to-Date Navigation H. S. Blackburne 2016-09-09 Excerpt from Modern Up-to-Date Navigation: Position Finding by the Improved "Sumner" Method Contrasted With the New Navigation (Marcq St. Hilaire System), And the Old "Sumner" Method The principal object of the publication of the following notes on practical modern navigation and the extracts and supplementary tables from our books of Nautical Tables is for the purpose of drawing more prominent attention to the great value and importance of the problem for finding the ship's position at twilight from the Observation of two or three stars. The great value of this problem in navigation was much impressed on the writer 'through his continued practice of it during

several years of his sea life, and the very general neglect of it by the majority of navigators has impelled him to do all in his power during the last thirty and Odd years to bring this problem into the regular practice of navigators, so far, he has to admit, without much success. He has long been strongly of the Opinion, which has been further impressed on him by the investigation of more than one shipping inquiry case held in New Zealand, that a general practice of this Observation would be the means of saving many ships from disaster. Two shipmasters have already thanked him, one by letter and the other verbally, for impressing the value of stellar observations on them through his books, and stating that through this their ships had been saved from great risk Of being lost through stranding. Although our tables are entitled Azimuth and Reduction Tables, and they have been acknowledged as such - to be the most complete and comprehensive tables yet published - the principal purpose of them, in the

author's mind, was for facilitating the problem of determining the ship's position from two Observations out of the meridian, and especially with the view of making this problem particularly easy for star-work. NO doubt they have encouraged, and will yet more do so, a small minority of navigators to take up this problem, but he is now firmly convinced that it will never become a general practice among ship Officers till the problem is given in the Board of Trade examinations for masters and mates, and candidates are allowed the use of such tables and methods as they have been in the habit of using to help them in solv ing the problem. The problem is already given in the Board Of Trade examination for extra master, but it is set in a way which I presume would never occur in actual practice, requiring two Observers with sextants and another person to take the time, and both observers must take their observation at the exact same instant of time, and the problem is then required to be worked by a very

lengthy process, which does not always give an accurate result (see example, page The outcome of this is to leave an impression on the mind Of the candidate that the problem is too long a business for ordinary practice, and in consequence is very generally dropped after he leaves the examination-room.
