## **Road Traffic Congestion: A Concise Guide** John C. Falcocchio

2015-03-13 This book on road traffic congestion in cities and suburbs describes congestion problems and shows how they can be relieved. The first part (Chapters 1 - 3) shows how congestion reflects transportation technologies and settlement patterns. The second part (Chapters 4 - 13) describes the causes, characteristics, and consequences of congestion. The third part (Chapters 14 - 23) presents various relief strategies - including supply adaptation and demand mitigation - for nonrecurring and recurring congestion. The last part (Chapter 24) gives general guidelines for congestion relief and provides a general outlook for the future. The book will be useful for a wide audience - including students, practitioners and researchers in a variety of professional endeavors: traffic engineers, transportation planners, public transport specialists, city planners, public administrators, and private enterprises that depend on transportation for their activities.

[Beyond Mobility](#) Robert Cervero 2017-12-05 "Beyond Mobility" also seeks to rethink how projects are planned and designed in cities and

suburbs at multiple geographic scales, from micro-designs such as parklets to corridors and city-regions. The book closes with a reflection on the opportunities and challenges in moving beyond mobility, with attention to emerging technologies such as self-driving cars and ride-hailing services and social equity topics such as accessibility, livability, and affordability.

**Who Will Build the Ark?** Benjamin Kunkel 2023-06-27 In *Who Will Build the Ark?*, leading radical thinkers debate left alternatives to runaway global heating, capitalist crisis and wider environmental breakdown, clarifying the stakes in today's key disputes between Green New Deal supporters and proponents of 'degrowth'. In a series of landmark texts first published by *New Left Review*, Herman Daly and Benjamin Kunkel discusses the possibility of an egalitarian, steady-state economy, while Robert Pollin warns against the worldwide slump 'degrowth' could bring and calls instead for a single-issue campaign - 2 per cent of global GDP dedicated to the switch to renewable energy - as the swiftest solution to the emissions crisis. Nancy Fraser envisages an eco-socialist exit from capitalism's multifold crises, while Troy Vettese advocates eco-austerity and half-earth rewilding. Lola Seaton draws out the strategic implications of these contested perspectives, in a set of

unavoidable 'green questions'. In the realm of contemporary politics, Alyssa Battistoni writes on the dead-end of COP diplomacy, Cdric Durand asks whether energy shortages will derail the transition away from fossil fuels, and Thomas Meaney compares Green New Deal proposals to the pinched reality of Biden's Inflation Reduction Act. The world's major powers accept the likelihood of dangerous climate change, yet seem incapable of averting it. Can radical green models generate the social leverage needed to do so? Or, as Mike Davis puts it: Who will build the Ark?

*City Politics, Pearson eText* Dennis R. Judd 2015-09-16 This text provides a foundation for understanding the politics of America's cities and urban regions. Praised for the clarity of its writing, careful research, and distinctive theme - that urban politics in the United States has evolved as a dynamic interaction among governmental power, private actors, and a politics of identity - City Politics remains a classic study of urban politics.

*The City* Jacques Lévy 2017-05-15 The spread of urbanization has transformed the concept of the city, but the way urban planners, urban scientists and, above all, urban dwellers address it has also changed, probably even more so. The city is thus a new topic for geography, a discipline that has experienced an ambiguous relationship to cities in the past. What kind of geography is required in order to bring fresh insight to this renewed field? Drawing together a wide range of texts from philosophers, sociologists and economist as well as geographers and urban planners, this volume provides a theoretical framework within which this question can begin to be explored.

*Suburban Gridlock* Robert Cervero 2017-09-04 Robert Cervero documents the rise in suburban traffic around the country and examines the role of various planning, design, and management approaches in defining the automobile's growing presence in suburbia. The book highlights suburban business complexes and mixed-use centers throughout the United States that have been planned and designed to reduce auto dependency and to promote ridesharing, transit usage, and other commuting alternatives. Steps taken by various municipalities to enlist the support of private interests in reducing employee trip-making and financing area-wide roadway improvements are also examined. While the analysis is national in scope, detailed case studies offer in-depth insights into the many institutional and logistical problems involved in mitigating the impact of suburban congestion. The transportation planning profession has historically focused its attention and resources on downtown access and mobility problems. Suburbs, and places beyond, have long been considered havens for travel, free from traffic jams, and ideal for leisurely weekend excursions. Over the years, transportation planning in suburbia has involved little more than adding new projects to five-year capital improvement programs. This book remains essential for planners, administrators, and citizens interested in the future of suburbia and safeguarding it from the coming transportation crisis.

**Stuck in Traffic** Anthony Downs 2000-07-26 Peak-hour traffic congestion has become a major problem in most U.S. cities. In fact, a majority of residents in metropolitan and suburban areas consider congestion their most serious local problem. As citizens have become increasingly frustrated by repeated traffic delays that cost them money and waste time, congestion has become an important factor affecting local government policies in many parts of the nation. In this new book, Anthony Downs looks at the causes of worsening traffic congestion, especially in suburban areas, and considers the possible remedies. He analyzes the specific advantages and disadvantages of every major strategy that has been proposed to reduce congestion. In nontechnical language, he focuses on two central issues: the relationships between land-use and traffic flow in rapidly growing areas, and whether local policies can effectively reduce congestion or if more regional approaches are necessary. In rapidly growing parts of the country, congestion is worse than it was five or ten years ago. But Downs notes that the problem has apparently not yet become bad enough to stimulate effective responses. Neither government officials nor citizens seem willing to consider changing the behavior and public policies that cause congestion. To alleviate the problem, both groups must be prepared to make these fundamental changes. Selected by Choice as an Outstanding Book of 1992 Co-published with the Lincoln Institute of Land Policy

**The Failure of Planning** Richard Hogan 2003 By 1970, uncontrolled growth plagued San Diego County suburbs and threatened to destroy the "paradise" of postwar San Diego, which had attracted a flood of immigrants since 1945. Fortunately, Mayor Pete Wilson, fresh from a Rockefeller Brothers land-use policy forum and armed with the latest progressive planning vision, sponsored a "big picture" planning solution, which has since been institutionalized as "smart growth." Despite the

triumph of progressive planning, however, and the multimillion-dollar-planning effort that continues to characterize suburban development, suburban sprawl continues. Freeway gridlock continues. Already exorbitant housing costs keep rising. In short, progressive planning has failed. This book explains how and why this has happened, not only in San Diego but more generally, and considers conservative, liberal, and radical paths toward a more successful future. Richard Hogan is associate professor of sociology and American studies at Purdue University.

**Curbing Gridlock** Transportation Research Board 1999-02-01 The Federal Highway Administration and Federal Transit Administration requested that the Transportation Research Board and the Commission on Behavioral and Social Sciences and Education of the National Research Council conduct a study of congestion pricing for congestion management. To conduct this study, the National Research Council established the Committee for Study on Urban Transportation Congestion Pricing. The committee's deliberations were supplemented by liaison representatives from several groups concerned about the benefits and costs of congestion pricing. After a review of the literature, and drawing from its expertise, the committee commissioned papers on a variety of topics. Volume 1 contains the committee's overview of the material contained in the commissioned papers, its conclusions, and its recommendations regarding the potential of congestion pricing, the need for evaluation of early demonstrations, and other research needs. Volume 2 provides a rich array of information about individual case studies from around the nation and thoughtful analyses by individual scholars about

many of the critical issues surrounding congestion pricing., as revised by their authors after the symposium.

**The Automobile in American History and Culture** Michael L. Berger 2001-07-30 This comprehensive reference guide reviews the literature concerning the impact of the automobile on American social, economic, and political history. Covering the complete history of the automobile to date, twelve chapters of bibliographic essays describe the important works in a series of related topics and provide broad thematic contexts. This work includes general histories of the automobile, the industry it spawned and labor-management relations, as well as biographies of famous automotive personalities. Focusing on books concerned with various social aspects, chapters discuss such issues as the car's influence on family life, youth, women, the elderly, minorities, literature, and leisure and recreation. Berger has also included works that investigate the government's role in aiding and regulating the automobile, with sections on roads and highways, safety, and pollution. The guide concludes with an overview of reference works and periodicals in the field and a description of selected research collections. *The Automobile in American History and Culture* provides a resource with which to examine the entire field and its structure. Popular culture scholars and enthusiasts involved in automotive research will appreciate the extensive scope of this reference. Cross-referenced throughout, it will serve as a valuable research tool.

*Design First* David Walters 2012-08-06 Well-grounded in the history and theory of Anglo-American urbanism, this illustrated textbook sets out objectives, policies and design principles for planning new communities and redeveloping existing urban neighborhoods. Drawing from their extensive experience, the authors explain how better plans (and consequently better places) can be created by applying the three-dimensional principles of urban design and physical place-making to planning problems. *Design First* uses case studies from the authors' own professional projects to demonstrate how theory can be turned into effective practice, using concepts of traditional urban form to resolve contemporary planning and design issues in American communities. The book is aimed at architects, planners, developers, planning commissioners, elected officials and citizens -- and, importantly, students of architecture and planning -- with the objective of reintegrating three-dimensional design firmly back into planning practice.

Urban Economy Colin Jones 2021-10-21 *Urban Economy: Real Estate Economics and Public Policy* analyses urban economic change and public policy in a more practical way than a typical urban economics book. The book has a distinctive framework that considers the underlying reasons, and the consequences of urban change for real estate investors and policy makers. Part 1 covers the basics of urban economics and real estate markets, including housing and commercial. Part 2 looks at the reformulation of urban systems and the reasons why. It then considers the consequences for real estate markets and investment of decentralisation forces and emerging technology. The issues that arise for urban public policy are then discussed, notably transport policies, public finance and sustainability, before a chapter examining housing neighbourhood and housing market dynamics and a shift from spatial change to regeneration. Part 3 reverses the dominant perspective of Part

2 to assess the effectiveness of how property led policies can positively influence a local economy and urban regeneration. The chapters consider several important policy questions and constraints and draw on a number of case studies that illustrate the benefits and drawbacks. The book includes chapter objectives, self-assessment questions, chapter summaries, learning outcomes, case studies, global data and statistics and is a new textbook for core courses in urban economics and real estate economics on global Real Estate, Planning and related degree courses.
