Worked to the Bone Pem Davidson Buck 2001-06 This work examines

race, class, and the mechanics of inequality in the US, focusing on Kentucky and its political and social transformation from slavery, sharecropping, and Jim Crow through the populist era, the rise of the Ku Klux Klan, and the state's integration into the global economy. The author combines sociological insight with her own personal narrative to illustrate the ways in which constructions of race and the promise of white privilege have been used in two Kentucky counties to divide working class people. Buck teaches anthropology and sociology at a college in Kentucky. c. Book News Inc.

The Wild Mammals of Missouri Charles Walsh Schwartz 2001 Prepared by two of Missouri's most distinguished conservationists, *The Wild Mammals of Missouri* has been the definitive guide to mammals of this state for over forty years. Now the University of Missouri Press is pleased to release an updated edition, revised by Elizabeth R. Schwartz, reflecting the changes in Missouri's mammalian fauna and including the latest taxonomic revisions. Maintaining the original's successful format and the language that made the book accessible to both professional and lay readers, the revised edition incorporates throughout new knowledge of the various species of mammals of Missouri. Most notable is the addition of a new resident species, the nine-banded armadillo. Several other taxonomic and distributional changes are reflected and the range maps have been revised to show significant changes. Charles Schwartz's meticulously rendered drawings capture the spirit of his subjects while remaining technically accurate. These drawings range from fully rendered portraits to illustrations of dentition and skulls, tracks, and other identifying characteristics, to vignettes showing the mammals engaged in characteristic behaviors. Also included in this volume are discussions of all biological and ecological aspects of the mammals including distribution and abundance, habitat and home, habits, food, reproduction, adversities faced, and conservation and management concerns. The Schwartzes' lifelong dedication to state and national conservation and their vast biological knowledge are apparent throughout the pages of this attractive reference guide. People of all

ages and backgrounds will find *The Wild Mammals of Missouri* an invaluable guide to the study of Missouri's mammals.

No Timber Without Trees Duncan Poore 2013-11-05 Much of the world's tropical timber is still supplied from natural forest, but under current systems of management the forests are rapidly becoming exhausted. Unless management practices change to become genuinely sustainable, neither the forests nor the essential contribution of the timber industry to many economies will survive. Duncan Poore reviews the extent to which natural forests are already being sustainably managed for timber production, and looks at how these practices can be enlarged. He places management for timber in the wider context of tropical forest conservation and outlines a strategy for further action. Thoroughly researched and accessibly written, this book will be useful for everyone working or interested in the subject of tropical forests. Foreword by Dato Dr B.C.Y. Skin and Bones Jane W. Gibson 2004 *Skin and Bones* relates the history of Shellcracker Haven, a community pseudonym, to the development of fresh water fish and wildlife management in the state of Florida. It examines the clash of worldviews between community residents who are personally invested and locally sensitive to the ecosystem that has fed their families for several generations, and biologist resource managers who rely on detached science-based models and political sensitivity when making policy decisions. *Skin and Bones* challenges readers to think about the natural world as more than fragile species and ecosystems to be defended against human destruction or as discrete natural resources to be commercially exploited. Through the Knight family of Shellcracker Haven, one learns of the power of emotional investment in the natural

world, and the cost to both people and planet when we destroy that relationship.

God in Chinatown Kenneth J. Guest 2003-08 An insightful look into the central role of religious community in the largest contemporary wave of new immigrants to New York Chinatown yet God in Chinatown is a path breaking study of the largest contemporary wave of new immigrants to Chinatown. Since the 1980s, tens of thousands of mostly rural Chinese have migrated from Fuzhou, on China's southeastern coast, to New York's Chinatown. Like the Cantonese who comprised the previous wave of migrants, the Fuzhou have brought with them their religious beliefs, practices, and local deities. In recent years these immigrants have established numerous specifically Fuzhounese religious communities, ranging from Buddhist, Daoist, and Chinese popular religion to Protestant and Catholic Christianity. This ethnographic study examines the central role of these religious communities in the immigrant incorporation process in Chinatown's highly stratified ethnic enclave, as well as the transnational networks established between religious communities in New York and China. The author's knowledge of Chinese coupled with his extensive fieldwork in both China and New York enable him to illuminate how these networks transmit religious and social dynamics to the United States, as well as how these new American institutions influence religious and social relations in the religious revival sweeping southeastern China. God in Chinatown is the first study to

bring to light religion's significant role in the Fuzhounese immigrants' dramatic transformation of the face of New York's Chinatown.

Voices of the Apalachicola Faith Eide 2007-10-01 One of the main water resources for Florida, Alabama, and Georgia, the Apalachicola River begins where the Chattahoochee and Flint rivers meet at Lake Seminole and flow unimpeded for 106 miles, through the red hills and floodplains of the Florida panhandle into the Gulf of Mexico. Voices of the Apalachicola is a collection of oral histories from more than thirty individuals who have lived out their entire lives in this region, including the last steamboat pilot on the river system, sharecroppers who escaped servitude, turpentine workers in Tate's Hell, sawyers of "old-as-Christ" cypress, beekeepers working the last large tupelo stand, and a Creek chief descended from a 200-year unbroken line of chiefs.

Fletcherism, What It Is Horace Fletcher 2008-03 Horace Fletcher, an American health-food advocate of the Victorian era, earned the nickname ""The Great Masticator"" through his advocacy that food needed to be

chewed thirty-two times before being swallowed. At the age of 58, he conducted a series of strength and endurance experiments at the Yale Gymnasium versus college athletes which claimed that Fletcher could outperform these athletes. Fletcher also had a great interest in human excreta, believing that it evidenced one's true nutrition. He also advocated for a low-protein diet as a means of health and well-being. Through this 1913 volume Fletcher explains his theories of health and well-being and how, you too, can become a Fletcherite.

In Defense of Farmers Jane Gibson 2019-07-01 Industrial agriculture is generally characterized as either the salvation of a growing, hungry, global population or as socially and environmentally irresponsible. Despite elements of truth in this polarization, it fails to focus on the particular vulnerabilities and potentials of industrial agriculture. Both representations obscure individual farmers, their families, their communities, and the risks they face from unpredictable local, national, and global conditions: fluctuating and often volatile production costs and crop prices; extreme weather exacerbated by climate change; complicated and changing farm policies; new production technologies and practices; water availability; inflation and debt; and rural community decline. Yet the future of industrial agriculture depends fundamentally on farmers' decisions. In *Defense of Farmers* illuminates anew the critical role that farmers play in the future of agriculture and examines the social, economic, and environmental vulnerabilities of industrial agriculture, as well as its adaptations and evolution. Contextualizing the conversations about agriculture and rural societies within the disciplines of sociology, geography, economics, and anthropology, this volume addresses specific challenges farmers face in four countries: Bolivia, Brazil, Canada, and the United States. By concentrating on countries with the most sophisticated production technologies capable of producing the largest quantities of grains, soybeans, and animal proteins in the world, this volume focuses attention on the farmers whose labors, decision-making, and risk-taking throw into relief the implications and limitations of our global industrial food system. The case studies here acknowledge the agency of farmers and offer ways forward in the

direction of sustainable agriculture.
