The Handbook of Communication Skills Owen Hargie 2018-07-16 The Handbook of Communication Skills is recognised as one of the core texts in the field of communication, offering a state-of-the-art overview of this rapidly evolving field of study. This comprehensively revised and updated fourth edition arrives at a time when the realm of interpersonal communication has attracted immense attention. Recent research showing the potency of communication skills for success in many walks of life has stimulated considerable interest in this area, both from academic researchers, and from practitioners whose day-to-day work is so dependent on effective social skills. Covering topics such as non-verbal behaviour, listening, negotiation and persuasion, the book situates communication in a range of different contexts, from interacting in groups to the counselling interview. Based on the core tenet that interpersonal communication can be conceptualised as a form of skilled activity, and including new chapters on cognitive behavioural therapy and coaching and mentoring, this new edition also places communication in context with advances in digital technology. The Handbook of Communication Skills represents the most significant single contribution to the literature in this domain. Providing a rich mine of information for the neophyte and practising professional, it is perfect for use in a variety of contexts, from theoretical mainstream communication modules on degree programmes to vocational courses in health, business and education. With contributions from an internationally renowned range of scholars, this is the definitive text for students, researchers and professionals alike.

Envisioning Landscape Dan Hicks 2016-06-03 The common feature of landscape archaeology is its diversity – of method, field location, disciplinary influences and contemporary voices. The contributors to this volume take advantage of these many strands to investigate landscape archaeology in its multiple forms, focusing primarily on the link to heritage, the impact on our understanding of temporality, and the situated theory that arises out of landscape studies. Using examples from New York to Northern Ireland, Africa to the Argolid, these pieces capture the human significance of material objects in support of a more comprehensive, nuanced archaeology.

What Is a Case? Charles C. Ragin 1992-07-31 The concept of the case is a basic feature of social science research and yet many questions about how a case should be defined, selected, and judged are far from settled. The contributors to this volume probe the nature of the case and the ways in which different understandings of the concept affect the conduct and the results of research. The contributions demonstrate that the work of any given researcher is often characterised by some hybrid of these basic approaches, and it is important to understand that most research involves multiple definitions and uses of cases, as both specific empirical phenomena and as general theoretical categories.

Babylonian Planetary Omens: without special title Erica Reiner 1998-01-01 This third fascicle of Babylonian Planetary Omens contains the edition of all cuneiform texts dealing with the planet Venus known to us. Most of these tablets are kept in the British Museum; the large number of unpublished texts were transliterated and the previously published texts were checked and collated from the originals. The texts are accompanied by translations, and each group of texts is commented upon by David Pingree from the point of view of the text history and astronomical significance. A general introduction, also by David

Pingree, analyzes the descriptions of Venus that occur in the texts in terms of astronomical phenomena. Indices are included to facilitate the study of this large corpus.

The International Court of Justice H. W. A. Thirlway 2016 "In recent years States have made more and more extensive use of the International Court of Justice for the judicial settlement of disputes. Despite being declared by the Court's Statute to have no binding force for States other than the parties to the case, its decisions have come to constitute a body of jurisprudence that is frequently invoked in other disputes, in international negotiation, and in academic writing. This jurisprudence, covering a wide range of aspects of international law, is the subject of considerable ongoing academic examination; it needs however to be seen against the background, and in the light, of the Court's structure, jurisdiction and operation, and the principles applied in these domains. The purpose of this book is thus to provide an accessible and comprehensive study of this aspect of the Court, and in particular of its procedure, written by a scholar who has had unique opportunities of close observation of the Court in action. This distillation of direct experience and expertise makes it essential reading for all those who study, teach or practise international law." --book flap.

On Commerce and Usury (1524) Martin Luther 2015-09-15 This volume presents Martin Luther's contribution to the modern economic sciences, providing a detailed introduction and revised translation of his major pamphlet on economic matters, 'On Commerce and Usury' ('Von Kauffshandlung vnd Wucher', 1524). In his teachings on indulgences Luther picked up on the question of hoarding money, and was among the earliest voices in early modern Europe calling for an 'ethical' economics. Luther's work prefigured many later contributions to modern economic theory, from the mercantilists and cameralists to the German Historical School.

Babylonian Magic and Sorcery Leonard W. King 2000-09-15 Originally published in 1896, this text

contains the cunieform text of 60 clay tablets written between 669-625 BC. These tablets were inscribed with prayers and religious compositions of a devotional and magical character and there is little doubt that they were compiled from Babylonian sources.

A General View of the Writings of Linnaeus Richard Pulteney 1805

Encyclopedia of Planetary Landforms Henrik Hargitai 2015-08-15 The technique of the mapping of planetary surfaces and the methods used for the identification of various planetary landforms improved much in the last 400 years. Until the 20th century, telescopic observers could interpret planetary landforms solely based on their appearance, while today various data sets acquired by space probes can be used for a more detailed analysis on the composition and origin of the surface features. Before the Greeks, the Earth and the Heavens were indisputably of different origin and nature. It was a major philosophical breakthrough - first appeared as an a priori theory, later based on observations - that the Heavens (planetary bodies) and the Earth share common features: gravity, composition and solar distance may be different, but the nature of the physical processes shaping the landforms are essentially the same. It has been a long way since we have arrived from the first telescopic description of lunar craters to the identification of various geological formations on Mars or on minor planets. Relief features of the Moon have first been observed by Galileo Galilei, via his telescope. During the next centuries, a multitude of Lunar landforms have been identified. Theories based on observations have been connected together by a scientific paradigm which explained their origin in a logical and seemingly undisputable manner. Telescopes showed a Lunar surface full of circular landforms, called craters, a landscape with no parallel on Earth. But the individual landforms had a morphological equivalent, volcanoes, which naturally led to the conclusion that craters had been created by volcanic processes. Maria ("seas") served as natural basins for water bodies. Observations clearly showed that water and air are hardly found on the Moon, the lack of clouds indicated the lack of precipitation. But the flat surface of the maria (obviously composed of marine sediments) and the meandering valleys suggested the presence of liquid water and a higher atmospheric pressure in the past - during the age of active volcanism and degassing. There were no observable active volcanic processes but some craters (though to be volcanoes) have been observed as being active: flashes of light - interpreted as eruptions - have been reported by several observers. The presence of pyroclasts thrown out from the volcanic vents of craters provided an independent evidence: meteor showers and individual meteorites falling from the sky - originating from Lunar craters. The logical and interconnected set of explanations based on observations proved to be completely false by the second half of the 20th century. The new paradigm interpreted the very same features in a new context. The case of Mars was different. There were no telescopes capable of observing relief forms (no shadows on Mars are visible from the Earth, because Mars always shows a nearly full Mars phase), so only albedo features could be seen and used for interpretation. The lack of visible relief features were interpreted as a lack of considerable topography: an unnoticed distortion in the observational data. The hue and contrast of dark and bright, orange, grey and white spots have changed seasonally, the polar areas clearly showed a polar cap made of ice and snow, but clouds have not been observed. Since Mars is farther away from the Sun than the Earth, it was evident that temperature values are lower there. Scientists concluded that Mars is an ancient, arid world. Then contemporary geology taught the theory according to which waters on the Earth are going to infiltrate underground in time, making the surface dry - observations showed that this had already happened on Mars. The last surface reservoirs of water were the polar caps. Some observers reported seeing a global network of linear features, but other have only seen very few of such albedo markings. These features were interpreted as "canals," made by a civilization for irrigation, carrying water from the poles to all around the flat plains of Mars. What was observable from the Earth were the broad stripes of irrigated vegetation (like those along the Nile), the canals themselves were too narrow to be visible from here. All theories converged - supposing that the features seen by some, but not seen by others, were real. There was no chance for verification until spacecrafts have been developed which were able to make local observations. Instead of canals, the first pictures returned revealed a surface full of craters - a landform not expected by anyone. A paradigm shift was needed to explain the features of the "new" Mars. On the Moon, features were observable, but the interpretation was wrong. On Mars, only blurred albedo markings could be observed, along with sharp lines of imagination, which again were interpreted falsely. In the case of

Venus, there was no data on surface features. Only its bright cloud top could be observed from the Earth. But this fact along with the planet's orbital parameters provided enough information for a popular view on its surface conditions: a hot world (inferred from its proximity to the Sun) and also a rainy one (from its complete cloud cover). The conclusion: Venus is a global jungle possibly with dinosaurs, like the hot and wet world of the then-discovered Mesozoic era. Our current knowledge originated from these early attempts of interpreting surface conditions and geological origin of landforms from a very little set of available data. Today we have a huge set of images and other physical data which makes it possible to create models on the inner structure and thermal history of planetary bodies. Combined data sets lead to better supported models on the formation of surface features. Today we believe that most models give reliable explanation for the origin of planetary landforms. New, higher resolution images reveal new sets of meso- and microscale landforms, while images from previously not imaged dwarf planets, satellites, asteroids and cometary nuclei show landforms never seen before. In the future exoplanets are expected to provide brand new types of relief features no predictable by our Earth-and Solar System bound imagination. There are so many different landforms on planetary surfaces that it is nearly impossible for anybody to overview all of them who does not work exactly with that certain feature type. The Encyclopedia helps with presenting the landforms in searchable, alphabetical order. The book contains more than a simple list of various features: it provides context and connections between them and point to their origin. For example sand dunes were found on Venus, Mars and Titan, fluvial valleys and shorelines are present on Mars and Titan, impact craters have many different types - all are presented and explained here. Beyond the texts, references, schematic figures, images and planetary maps accompany the description of landforms, providing a wide background for detailed analyses even for geomorphologists working in planetary science. This book is to help the reader to discover the great variety of planetary landforms.

The Natural System of Political Economy Friedrich List 2016-11-25 The importance of this book, translated for the first time in 1983, lies not so much in List's advocacy of the fiscal policy of protection as in the relatively new doctrines that he put forward. He discussed stages of economic growth, 'productive powers' and the industrialisation of developing regions. List's most fundamental teachings are fully developed in this book.

Urban Disaster Resilience and Security Alexander Fekete 2017-12-04 This edited book investigates the interrelations of disaster impacts, resilience and security in an urban context. Urban as a term captures megacities, cities, and generally, human settlements, that are characterised by concentration of quantifiable and non-quantifiable subjects, objects and value attributions to them. The scope is to narrow down resilience from an all-encompassing concept to applied ways of scientifically attempting to 'measure' this type of disaster related resilience. 28 chapters in this book reflect opportunities and doubts of the disaster risk science community regarding this 'measurability'. Therefore, examples utilising both quantitative and qualitative approaches are juxtaposed. This book concentrates on features that are distinct characteristics of resilience, how they can be measured and in what sense they are different to vulnerability and risk parameters. Case studies in 11 countries either use a hypothetical pre-event estimation of resilience or are addressing a 'revealed resilience' evident and documented after an event. Such information can be helpful to identify benchmarks or margins of impact magnitudes and related recovery times, volumes and qualities of affected populations and infrastructure.

The Palgrave Handbook of Populism Michael Oswald 2021-11-15 This handbook assesses the phenomenon of populism—a concept frequently belabored, but often misunderstood in politics. Rising populism presents one of the great challenges for liberal democracies, but despite the large body of research, the larger picture remains elusive. This volume seeks to understand the causes and workings of modern-day populism, and plumb the depths of the fears and frustrations of people who have forsaken established parties. Although the main focus of this volume is political science, there are more disciplines represented in order to get a whole picture of the debate. It is comprised of strong empirical and theoretical papers that also bear social relevance.

Right-Wing Women Paola Bacchetta 2013-01-11 An oft-neglected subject, right-wing women are an important component in understanding the many racist, fascist, and anti-feminist movements of the 20th century. Providing original research on an array of right-wing groups around the world, the contributors paint a disturbing and complicated portrait of the women involved in these movements. From Mussolini supporters to Klanswomen, this collection provides an eye-opening look at extremist women.

Interculturalism and multiculturalism: similarities and differences Martyn Barrett 2013-12-11 This book examines the relationship between two policy approaches for managing the cultural diversity of contemporary societies: interculturalism and multiculturalism. The relationship between these two approaches has been a matter of intense debate in recent years. Some commentators argue that they represent two very different approaches, while others argue that interculturalism merely re-emphasises some of the core elements of present day multiculturalism. The debate arises, in part, because multiculturalism can take a variety of different forms, which makes it difficult to identify its key features in order to compare it with interculturalism. The debate has gained added momentum from the backlash against multiculturalism in recent years, and from the Council of Europe's prominent championing of interculturalism as an alternative approach. This book aims to clarify the concepts of interculturalism and multiculturalism, and to bring the various arguments together in a way that will assist politicians, policy makers, practitioners and interested lay people to understand the concerns that are driving the different orientations. The book is also intended to facilitate a comparison of the policy implications of interculturalism and multiculturalism. To this end, each chapter concludes with a concise statement of the implications for policy that follow from the viewpoint that has been expressed.

Educational Research: Discourses of Change and Changes of Discourse Paul Smeyers 2016-05-26 This collection addresses concepts and theories of change, contexts and functions of reform discourses, and fields of change in educational research. It examines a wide variety of issues such as girls' education in France, educational neuroscience, the professionalization in Child Protection, and mathematics discourses. It pays attention to the pervasiveness of crisis rhetoric in American Education Research, to the current university climate, and to perspectives for teacher education. The volume presents in-depth studies that integrate the perspective of history and philosophy of education. Educational research has been typically carried out within a discourse of change: changing educational practice, changing policy, or changing the world. Sometimes these expectations have been grand, as in claims of emancipation; sometimes they have been more modest, as in research as a support for specific reforms. This book explores the answers to such questions as: Are these expectations justified? How have these discourses of change themselves changed over time? What have researchers meant by change, and related concepts such as reform, improvement, innovation, progress and the new? Does this teleological and hopeful discourse itself reflect a particular historical and national/cultural point of view? Is it over promising for educational research to claim to solve social problems, and are these properly understood as educational problems? In doing so, it challenges prevailing ideas about the application of philosophy and history of education, and demonstrates the relevance of philosophical and historical approaches for the practice and theory of education and for educational research. This publication, as well as the ones that are mentioned in the preliminary pages of this work, were realized by the Research Community (FWO Vlaanderen / Research Foundation Flanders, Belgium) Philosophy and History of the Discipline of Education: Faces and Spaces of Educational Research.

Case Study Research John Gerring 2006-12-11 Case Study Research: Principles and Practices aims to provide a general understanding of the case study method as well as specific tools for its successful implementation. These tools can be utilized in all fields where the case study method is prominent, including business, anthropology, communications, economics, education, medicine, political science, social work, and sociology. Topics include the definition of a 'case study,' the strengths and weaknesses of this distinctive method, strategies for choosing cases, an experimental template for understanding research design, and the role of singular observations in case study research. It is argued that a diversity of approaches - experimental, observational, qualitative, quantitative, ethnographic - may be successfully integrated into case study research. This book breaks down traditional boundaries between qualitative and quantitative, experimental and nonexperimental, positivist and interpretivist.

Secret Societies and Subversive Movements Nesta Helen Webster 1924 Webster lays out, in historical perspective, how secret societies and subversive movements have operated and controlled revolutions from behind the scenes. Webster writes that while many groups have been started to promote high values and seek knowledge, some become perverted by power-hungry individuals who see ways to exploit the world for their own benefit.

Twelve Years A Slave, Illustrated Edition Solomon Northup 2014-04-08 Kidnapped and sold into slavery in the American South, freeman Solomon Northup spent twelve years in bondage before being freed. Twelve Years a Slave is Northup's moving memoir, revealing unimaginable details of the horrors he faced as a slave on Southern plantations, and his unshakable belief that he would return home to his family. Written in the year after Northup was freed and published in the wake of Harriet Beecher Stowe's Uncle Tom's Cabin, Northup's story was quickly taken up by abolitionist groups and news organizations as part of the fight against slavery, and continues to resonate more than a century after the end of the American Civil War.
