Safe Loads on Ice Sheets (Ice Engineering. Number 13). 1996 Every winter, ice sheets that grow on lakes and rivers in northern states are used for ice roads, ice bridges, construction

platforms, airstrips, and recreational activities, It becomes very important, therefore, to know when the ice is safe to use for these purposes. Figure 1 shows a tow truck and the pickup truck (nearly obscured) it was sent to pull out, both of which fell through lake ice that was not thick enough to support them. Unfortunately, events like this occur every year, sometimes with loss of

life. We offer here some guidelines for determining the safety of freshwater ice. Because vehicles, snowmobiles, and people often have fallen through ice, research has been done to determine when an ice sheet is safe for certain loads, Gold (1971) collected a considerable amount of data on the use of ice sheets by aircraft, construction activities, trucks, and tractors in Canada. Using these observations, Gold proposed three plots to represent safe ice thicknesses for various loads (Fig. 2). The upper plot is the most conservative (i.e safest), while the lower plot is the least conservative.

Ice Diving Operations Walt Hendrick 2003 Ice diving is one of the most technical kinds of diving--incorporating both overhead and confined space risks. The lack of proper training can have disastrous results. Ice Diving

Operations is written for public safety divers, decision makers, EMS, sport divers, and instructors, and fills the void in education for each level. The extensive information presented on hypothermia, universal safety procedures and much more, make this book invaluable even for non-ice diving operations. Ice Diving Operations is designed to be used to create uniform procedures and guidelines to meet NFPA and OSHA standards.

50 Years of Safety in Ice Hockey: What Have We Learned and Where Do We Need to Go?

Patrick J. Bishop 2020 This work deals with summarizing fifty years of safety in ice hockey conducted by ASTM Subcommittee F08.15 on Sports Equipment, Playing Surfaces, and Facilities. It provides a brief review of the standards created and of the five previous symposia on safety in ice hockey and other symposia dealing with significant traumatic injury presented by Subcommittee F08.15 over the years. It also briefly examines three areas in which future developments may be of significance: Can concussion risk reduction be achieved through helmet standards modification? Is a helmet standard needed for youths and females? Is there a need to modify ASTM F1587, Standard Specification for Head and Face Protective Equipment for Ice Hockey Goaltenders , the goaltender head and face protector standard? Reasons for asking these questions and some of the requirements needed

to effect these modifications are briefly discussed.
