Screening Donated Blood for Transfusion-transmissible Infections

World Health Organization 2010 "Blood transfusion is a life-saving intervention that has an essential role in patient management within health care systems. All Member States of the World Health Organization (WHO) endorsed World Health Assembly resolutions WHA28.72 (1) in 1975 and WHA58.13 (2) in 2005. These commit them to the provision of adequate supplies of safe blood and blood products that are accessible to all patients who require transfusion either to save their lives or promote their continuing or improving health." --Preface.

Blood Donor Counselling World Health Organization 2016-06-24

Individuals who donate their blood provide a unique and precious gift in

an act of human solidarity. In order to donate blood, prospective donors should be in good health and free from any infections that can be transmitted through transfusion. Most blood donors perceive themselves to be healthy, but some are unsuitable to donate blood due to the potential risk of compromising or worsening their own health or the risk of transmission of infections to patients. Blood transfusion services (BTS) have a duty of care towards blood donors as well as to the recipients of transfusion. This duty of care extends to prospective donors who are deferred from donation--whether on a temporary or permanent basis--as well as those who donate blood and are subsequently found to have unusual or abnormal test results. BTS have a responsibility to confirm test results and provide information, counseling and support to enable these individuals to understand and respond to unexpected information about their health or risk status. Counseling is part of the spectrum of care that a BTS should be able to provide to blood donors--including referral to medical practitioners or specialist clinical services. Pre-donation counseling was recognized as one element of the strategy to reduce and, if possible, prevent the donation of blood by individuals who might be at risk for HIV and other TTI including hepatitis B and C viruses as well as to inform the donor of the donation process and testing of blood for HIV. Post-donation counseling was acknowledged to be a necessary element of donor management as an adjunct to informing donors of unusual or abnormal test results. Blood donor counseling by trained specialist staff is now considered to be a key component of the blood system in most countries with a well-developed blood transfusion service. It may be required at a number of stages in the blood donation process or following blood screening and should be available at any point at which the BTS has an interface with donors. In many countries, however, blood donor counseling is not yet available in a structured way. Blood Donor Counselling: Implementation Guidelines has therefore been developed to provide guidance to blood transfusion services that have not yet established donor counseling programs.

ABC of Transfusion Marcela Contreras 2013-05-30 Blood services and Transfusion Medicine have become more clinical, scientific, well

organised and consolidated over the last 20 years. More is known about the frequency and aetiology of the hazards of blood transfusions. The ABC of Transfusion is a well established introduction for all staff working in blood services, blood transfusion departments, surgical units and intensive care, and all prescribers and users of blood. It is a comprehensive, highly regarded guide to all the practical aspects of blood transfusion, including the various complications that can arise. This fourth edition of ABC of Transfusion includes five new chapters on all the latest issues including pre-transfusion testing, vCJD, stem cell transplantation, immunotherapy, and appropriate use of blood - reflecting the fact that transfusion medicine has been revolutionised. Useful as a practical guide, a refresher or for quick reference, it covers all essential transfusion matters and is an ideal source of information for all health professionals involved with safe and efficient use of blood.

Blood Transfusion Services in Sub Saharan Africa Dr. Erhabor Osaro 2012-08-09 This book reiterates the need for all stake holders involved in transfusion service delivery in Africa; from patients to the transfusion scientist, requesting clinicians, blood collection staff and distribution staff to work collaboratively to demonstrate judicious, world-class stewardship and use of the precious gifts of human blood as well as help people understand the limitations of blood supply. It is designed to emphasize the evidenced based best practices in transfusion medicine in the developed world to enable countries in Africa optimise their transfusion service delivery to their patients.

HIV and the Blood Supply Committee to Study HIV Transmission Through Blood and Blood Products 1995-10-19 During the early years of the AIDS epidemic, thousands of Americans became infected with HIV through the nation's blood supply. Because little reliable information existed at the time AIDS first began showing up in hemophiliacs and in others who had received transfusions, experts disagreed about whether

blood and blood products could transmit the disease. During this period of great uncertainty, decisionmaking regarding the blood supply became increasingly difficult and fraught with risk. This volume provides a balanced inquiry into the blood safety controversy, which involves private sexual practices, personal tragedy for the victims of HIV/AIDS, and public confidence in America's blood services system. The book focuses on critical decisions as information about the danger to the blood supply emerged. The committee draws conclusions about what was done--and recommends what should be done to produce better outcomes in the face of future threats to blood safety. The committee frames its analysis around four critical area Product treatment--Could effective methods for inactivating HIV in blood have been introduced sooner? Donor screening and referral--including a review of screening to exclude high-risk individuals. Regulations and recall of contaminated blood--analyzing decisions by federal agencies and the private sector. Risk communication--examining whether infections could have been averted by better communication of the risks.

Essential Guide to Blood Groups Geoff Daniels 2013-08-29 A short, up-to-date text on blood groups, for people working or training in the field of blood transfusion, transplantation, or human genetics, but who are not specialising in the field of blood groups, the third edition of *Essential Guide to Blood Groups* is a pocket-sized book, containing full-colour text together with schematic figures and tables. The book comprises an introduction to blood groups, followed by chapters on techniques, information on various blood groups, antibodies, quality assurance in immunohaematology, and it concludes with chapters on troubleshooting in the laboratory, and FAQs. It also covers the serology, inheritance, biochemistry and molecular genetics of the most important blood group systems.

Safe Blood Joseph Feldschuh 2010-05-11 Thousands of hemophiliac children have contracted hepatitis and AIDS from transfusion with infected blood. Ninety-five percent of all Americans will need transfusions at some point in their lives; yet it has taken the terrifying emergence of AIDS to alert an unsuspecting public to the actual risks involved. Dr. Feldschuh documents the inadequacies and shocking oversights of the blood-bank system, elucidating the risks of present practices and suggesting specific alternatives, including the now feasible storing of one's own blood, "pedigreed" donors, and mono-donor transfusion.

WHO Guidelines on Drawing Blood Neelam Dhingra 2010 Phlebotomy uses large, hollow needles to remove blood specimens for lab testing or blood donation. Each step in the process carries risks - both for patients and health workers. Patients may be bruised. Health workers may receive needle-stick injuries. Both can become infected with bloodborne organisms such as hepatitis B, HIV, syphilis or malaria. Moreover, each step affects the quality of the specimen and the diagnosis. A contaminated specimen will produce a misdiagnosis. Clerical errors can prove fatal. The new WHO guidelines provide recommended steps for

safe phlebotomy and reiterate accepted principles for drawing, collecting blood and transporting blood to laboratories/blood banks.
