Using Labor Market Information in Career Exploration and Decision Making 1986 This self-study curriculum guide is intended to assist counselors and teachers in learning to use labor market and career information with clients more effectively. The following topics are covered: understanding career development and the use of career and labor market information in career counseling (changing ideas about career development, the role of theory, classification of theories as structural or developmental, and career development theories and career counseling); understanding the labor market (the basic model of the labor market and modifications of the concepts of supply and demand); exploring labor market information sources and systems (major state and federal sources, career information delivery systems, and nongovernmental sources); exploring labor market information resources and products (including discussions of 17 major resources); using labor market information in career counseling (occupational questions and resources and career counseling case studies); and developing a professional plan of action (professional, information, and community development). Appendixes include additional labor market information resources, guidelines for preparing and evaluating career information literature, designated vocational/career competency areas, introductions

to the military services and the American labor movement, networking resources for establishing lines of communication, a glossary, and lists of acronyms and additional resources. (MN)

Key Labor Market Indicators Ina Pietschmann 2016-10-13 Key Labor Market Indicators: Analysis with Household Survey Data is an introduction to labor market indicator analysis and a guide for analyzing household survey data using the ADePT ILO (International Labour Organization) Labor Market Indicators Module. The analytical framework and approach taken up in this book are based on the ILO's Key Indicators of the Labour Market (KILM). KILM indicators provide a strong basis on which to address key questions related to productive employment and decent work. The ADePT ILO Labor Market Indicators Module is a powerful tool for producing and analyzing KILM indicators using household survey data. The software allows researchers and practitioners to automate data production, to minimize data production errors, and to quickly produce a wide range of labor market data from labor force surveys or other household surveys that contain labor market information. ABOUT ADePT Streamlined Analysis with ADePT Software is a series that provides academics, students, and policy practitioners with a theoretical foundation, practical guidelines, and software tools for applied analysis in various areas of economic research. ADePT Platform is a software package developed in the research department of the World

Bank (see www.worldbank.org/adept). The series examines such topics as sector performance and inequality in education, the effectiveness of social transfers, labor market conditions, the effects of macroeconomic shocks on income distribution and labor market outcomes, child anthropometrics, and gender inequalities.

Can big data save labor market information systems? Eric Johnson 2016-08-03 Labor markets desperately need information to function effectively and efficiently, making labor market information systems critical public investments. Yet government systems face significant challenges in collecting quality data, turning it into useable market intelligence, and disseminating it in a timely, relevant manner, a situation more acute in developing countries. The rise of private, real-time labor market information (LMI), such as web-based job posting analytics, social network inferences, crowdsourcing, and mobile phone polling, has garnered interest and questioned the dominance of traditional approaches. This brief explores the use of real-time LMI and presents interviews conducted with international donor officials to gain their perspectives on its applicability in developing countries. I suggest that real-time LMI is unlikely to supplant traditional LMI collection anytime soon, and I dispel notions that these new approaches might leapfrog current data collection challenges. Real-time LMI can provide useful in special cases and for supplemental analysis, an additional lubricant for labor markets that suffer from weak data. Policy that supports the improvement of traditional LMI and promotes access to real-time LMI is warranted.

Assessment of the Labor Market Information System (LMIS) in the Lao People's Democratic Republic PDR. World Bank 2022 The Lao People's Democratic Republic (PDR) has made substantial progress in poverty reduction even though its resource-based development pattern has historically limited the impact of growth on poverty reduction. The objective of the assessment is to support the Ministry of Labor and Social Welfare (MOLSW) in their planned reforms of labor market institutions and systems in Lao; in particular by supporting investments in a comprehensive Labor Market Information System (LMIS) for improved jobseeker data collection and analytics, jobseeker profiling, and assignment to various employment support programs such as vocational trainings and job search assistance. The target audience of this report is the technical staff and management at the department levels as well as the policy makers at the MOLSW, Ministry of Planning and Investment (MPI) as well as the Ministry of Finance (MOF).

The importance of geospatial data to labor market information Eric M. Johnson 2018-06-27 School-to-work transition data are an important component of labor market information systems (LMIS). Policy makers, researchers, and education providers benefit from knowing how long it takes work-seekers to find employment, how and where they search for employment, the quality of employment obtained, and how steady it is over time. In less-developed countries, these data are poorly collected, or not collected at all, a situation the International Labor Organization and other donors have attempted to change. However, LMIS reform efforts typically miss a critical part of the picture—the geospatial aspects of these transitions. Few LMIS systems fully consider or integrate geospatial school-to-work transition information, ignoring data critical to understanding and supporting successful and sustainable employment: employer locations; transportation infrastructure; commute time, distance, and cost; location of employment services; and other geographic barriers to employment. We provide recently collected geospatial school-to-work transition data from South Africa and Kenya to demonstrate the importance of these data and their implications for labor market and urban development policy.

Toward a World-Class Labor Market Information System for Indonesia Weltbankgruppe 2021 Human capital development is at the top of Indonesia's economic development agenda. The National Long-Term Development Plan (RPJPN 2005-2025) identifies human resource development as one of the key drivers of the eight national development goals to be achieved by 2025. As part of this push, the government of Indonesia has taken several steps to build a skilled and competitive workforce building on the country's demographic strengths, strategic position, and sustained economic growth. An important milestone was the launch in 2016 of a national initiative known as Revitalization of Secondary Vocational Schools, which the Ministry of Education and

Culture has updated recently. This initiative focuses on strengthening the quality and relevance of secondary vocational schools. Chapter one proposes a framework for defining an advanced LMIS that includes stakeholders, functions, key elements, key characteristics, and essential features that go well beyond those of an online job-matching platform. Chapter two discusses the current state of Indonesia's AyoKitaKerja, which is the focus of the analysis, is the most developed LMIS function and is considered the building block of Indonesia's LMIS. Chapter two also presents Indonesia's LMIS-related initiatives in addition to AyoKitaKerja and introduces some comparison with LMISs in other countries. Chapter three focuses in more detail on the factors that are essential for building up the five key characteristics of a well-functioning LMIS. The analysis benchmarks AyoKitaKerja against Korea's Work-net in each of these areas, with a particular focus on the job-matching function. Finally, chapter four provides a vision and action plan for developing a comprehensive LMIS.
