**Can We Read Letters?** Finn Egil Tønnessen 2015-02-27 "In their new book, Finn Egil Tønnessen and Per Henning Uppstad provide a set of theoretical and philosophical reflections on research in reading and dyslexia. It is a pleasure to welcome this book, which reflects the many contributions made by researchers at the National Centre for Reading Education and Research in Stavanger, Norway." - Professor Usha Goswami, University of Cambridge. Careful reflection on the concepts and methods used is a prerequisite for further development in any field of research. The authors think cognitive psychology has become too dominant in reading and dyslexia research, arguing that it should be combined with behaviourism and connectionism - in part by focusing on the concept of 'skill'. The key components of a skill are claimed to be automaticity, awareness and shifts between them. Reading is defined as an interpretative skill, which should be viewed from the perspective of hermeneutics. The authors use these fundamental analyses and definitions to shed new light on the 'balanced approach to reading instruction', 'reading fluency' and other key concepts. The book also deals with problems in the definition of 'dyslexia' and proposes a method to arrive at clear and fruitful definitions. It concludes with a chapter trying to answer the question of in what sense, or to what extent, it can be claimed that reading and dyslexia research has made progress. The book mainly builds on articles published over the past 25 years by Professor Finn Egil Tønnessen at the National Centre for Reading Education and Research, Stavanger, Norway.

**Become a SuperLearner** Jonathan Levi 2015-04-01 Develop the Skills to Learn Anything Faster, Easier, and More Effectively Written by the creators of the #1 bestselling course of the same name, this book will teach you how to "hack" your learning, reading, and memory skills, empowering you to learn everything faster and more effectively. What Would You Do If You Could Learn Anything 3 Times Faster? In our rapidly changing and information-driven society, the ability to learn quickly is the single most important skill. Whether you're a student, a professional, or simply embarking on a new hobby, you are forced to grapple with an every-increasing amount of information and knowledge. We've all experienced the frustration of an ever-growing reading list, struggling to learn a new language, or forgetting things you learned in even your favorite subjects. This Book Will Teach You 3 Major Skills: Speed reading with high (80%+) comprehension and understanding Memory techniques for storing and recalling vast amounts of information quickly and accurately Developing the cognitive infrastructure to support this flood of new information long-term However, the SuperLearning skills you'll learn in this course are applicable to many aspects of your every day life, from remembering phone numbers to acquiring new skills or even speaking new languages. Anyone Can Develop Super-Learning Skills This course is about improving your ability to learn new skills or information quickly and effectively. We go far beyond the kinds of "speed reading" (or glorified skimming) you may have been exposed to, diving into the actual cognitive and neurological factors that make learning easier and more successful. We also give you advanced memory techniques to grapple with the huge loads of information you'll soon be able to process. "This book should be the go-to reference for anyone looking to upgrade their mind's firmware!" -Benny Lewis, Language Learning Expert Learn How to Absorb and Retain Information in a Whole New Way - A Faster, Better Way The Authors' Proprietary Method for Teaching Speed Reading & Memory Improvement You may have even taken a normal speed reading course in the past, only to realize that you didn't retain anything you read. The sad irony is that in order to properly learn things like speed reading skills and memory techniques in the past, you had to read dozens of books and psychological journals to decode the science behind it. Or, you had to hire an expensive private tutor who specializes in SuperLearning. That's what I did. And it changed my life. Fortunately, my co-authors (experts and innovators in the fields of superlearning, memory improvement, and speed reading) agreed to help me transform their materials into the first ever digital course. Over 25,000 satisfied students later, we have transformed our course into a book you can enjoy

anywhere. Our teaching methodology relies heavily on at-home exercises. The chapters themselves are only part of what you're buying. You will be practicing various exercises and assignments on a regular basis over the course a 7 week schedule. In addition to the lectures, there are hours of supplemental video and articles which are considered part of the curriculum. "This vital book contains all the tools needed to learn, memorize, and reproduce anything you want with the joy that ease brings. Don't take another class until you've read it!" -Dr. Anthony Metivier, Author & Memory Expert If you wish to improve memory and concentration, learn more effectively, read faster, and learn the techniques of memory champions - look no further! An awesome read that will push the limits of your brain. Levi does an incredible job of guiding you through, to bring your brain from average to UNSTOPPABLE!" -Nelson Dellis, 4-Time USA Memory Champion

**Unveiling the Cloak of Invisibility** Anthony G. Robins 2023-05-01 This book explores why Black men continue to be severely underrepresented in the STEM disciplines. It provides chapters that explore factors that lead to underrepresentation of Black males in STEM (e.g., societal traditions of what type of work is appropriate; the ruptured pipeline that leads to higher rates of attrition at every level of career development; barriers in science fields such as subtle and overt discrimination; and inequitable resources and opportunities). The premise of this volume is if Black males are to compete in an emerging global economy fueled by rapid innovation and marked by an astonishing pace of technological breakthroughs, they must be present. The book makes new contributions to the field. The collective of higher education professionals and change agents whom are tied to STEM bring cutting-edge thinking in how best to address the leaky STEM pipeline which has left the industry/workforce void of talented Black men. The volume promises timely, relevant and emergent scholarship and perspectives for STEM leadership, scholars and supporters. It provides promising practices (best practices) and recommendations in recruiting and retaining Black males in STEM disciplines and the competitive market place.

**Study Skills** Pat Guy 2007-08-23 Includes CD-Rom There are many 'Do-it-Yourself' manuals for students and young people experiencing study skills problems. However, if this group of young people could study these books then they would already have the skills necessary! In order to use a self help manual the student needs internal motivation, the ability to self-instruct from text and the ability to put the learned strategy into place... but these are the same attributes that these students find difficult. In this book, Pat Guy provides a series of lesson plans making up a taught study skills course for secondary schools, sixth forms, FE colleges and Pupil Referral Units. She shows the reader how to teach, through self assessment, practice and confidence-building techniques, the techniques and self management required to achieve independent study skills. All the activities and worksheets, including revision and exam tips for the students, are easily printable from the accompanying CD-rom. The sessions can be delivered by teachers, tutors, Learning Mentors, or anyone whose aim is to improve attendance and achievement in older students. Pat Guy has taught for over twenty years in LEA and secondary schools in Outer London, Northamptonshire, Birmingham and Bedfordshire as a class teacher, subject teacher, SEN support, SENCO and advisory teacher.

**Principled Practices for Adolescent Literacy** Elizabeth G. Sturtevant 2016-02-11 This book presents an evidence-based framework for understanding the literacy needs of adolescents. The premise is that educators and other critical stakeholders need to understand evidence-based principles in order to develop effective curriculum to meet the needs of diverse learners. Recommendations are provided for middle and secondary education, professional development, teacher education research and policy. At the center of the book are Eight Guiding Principles developed by the authors through a process that included an extensive review of research and policy literature in literacy and related fields, a comparison of National Standards documents, and visits to the classrooms of 28 middle and high school teachers across the United States. The Principles are broad enough to encompass a variety of contexts and student needs, yet specific enough to offer real support to those involved in program development or policy decisions. They provide an overarching structure that districts and teachers can use to develop site-specific curriculum that is both research-based and designed to meet the needs of the learners for whom they are responsible. Important Text Features: Organized to help readers understand empirically supported principles of practice that can be used to address literacy concerns in today's schools, each chapter that addresses one of the eight Principles follows a similar format: \* The Principle is presented along with a brief explanation of the research base and a sample of national standards that support it. \* One or more case examples spanning a wide variety of disciplines, grade levels, and local conditions - provide an in-depth look at the Principle in action. \* A well-known adolescent literacy expert offers a response to each case example, giving readers an informed view of the importance of the Principle, how it is enacted in the cases, and examples of other work related to the Principle. Discussion questions are provided that can be used for individual reflection or group discussion. Principled Practices for Adolescent Literacy is intended as a text for pre-service and in-service upper-elementary, middle and high school literacy methods courses and graduate courses related to adolescent literacy,

and as a resource for school district personnel, policymakers and parents.

**Raise Your GPA 1 Full Grade** Edward Anhalt 2003-01-13 Success in studying isn't difficult. But one must first learn the secrets of "how to study." Why is it that every new teacher one inherits along the path to graduating high school has assumed that the teachers from the past grades have taught their students how to study? They may have taught course content, but not the way in which one learns the content. Because of this, students are working in ways that do not maximize their true potential. *Raise Your GPA 1 Full Grade* helps create an even playing field for all learners. The areas covered in this text are: time management, listening skills/note taking, reading for speed and comprehension, writing with a purpose, taking the fear out of examinations, how to outline, using mnemonics, and how to use resources (library, Internet, dictionary etc.) *Raise Your GPA 1 Full Grade* calls for no extra homework, and is as easy to use as working your way around the Monopoly board and collecting \$200.00. It's nice when someone learns they can succeed!
