Climate and History Robert I. Rotberg 2014-07-14 The effect of climate on historical change represents an exciting frontier for reading and research. In this volume scholars contribute to an area of interdisciplinary study which has not been systematically explored by climatologists and historians working together. Originally published in 1981. The Princeton Legacy Library uses the latest print-on-demand technology to again make available previously out-of-print books from the distinguished backlist of Princeton University Press. These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions. The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905.

Interdisciplinarity in the Making Nancy J. Nersessian 2022-11-22 A cognitive ethnography of how bioengineering scientists create innovative modeling methods. In this first full-scale, long-term cognitive ethnography by a philosopher of science, Nancy J. Nersessian offers an account of how scientists at the interdisciplinary frontiers of bioengineering create novel problem-solving methods. Bioengineering scientists model complex dynamical biological systems using concepts, methods, materials, and other resources drawn primarily from engineering. They aim to understand these systems sufficiently to control or intervene in them. What Nersessian examines here is how cutting-edge bioengineering scientists integrate the cognitive, social, material, and cultural dimensions of practice. Her findings and conclusions have broad implications for researchers in philosophy, science studies, cognitive science, and interdisciplinary studies, as well as scientists, educators, policy makers, and funding agencies. In studying the epistemic practices of scientists, Nersessian pushes the boundaries of the philosophy of science and cognitive science into areas not ventured before. She recounts a decades-long, wide-ranging, and richly detailed investigation of the innovative interdisciplinary modeling practices of bioengineering researchers in four university laboratories. She argues and demonstrates that the methods of cognitive ethnography and qualitative data analysis, placed in the framework of distributed cognition, provide the tools for a philosophical analysis of how scientific discoveries arise from complex systems in which the cognitive, social, material, and cultural dimensions of problem-solving are integrated into the epistemic practices of scientists. Specifically, she looks at how interdisciplinary environments shape problem-solving. Although Nersessian’s case material is drawn from the bioengineering sciences, her analytic framework and methodological approach are directly applicable to scientific research in a broader, more general sense, as well.

Population History and the Family Robert I. Rotberg 2001 This collection looks at the many dimensions of the study of populations and population movements.

William Howard Taft's Constitutional Progressivism Kevin J. Burns 2021-05-26 In William Howard Taft’s Constitutional Progressivism Kevin J. Burns makes a compelling case that Taft’s devotion to the Constitution of 1787 contributed to his progressivism. In contrast to the majority of scholarship, which has viewed Taft as a reactionary conservative because of his constitutionalism, Burns explores the ways Taft’s commitment to both the Constitution and progressivism drove his political career and the decisions he made as president and chief justice. Taft saw the Constitution playing a positive role in American political life, recognizing that it created a national government strong enough to enact broad progressive reforms. In reevaluating Taft’s career, Burns highlights how Taft rejected the “laissez [sic] faire school,” which taught that “the Government ought to do nothing but run a police force.” Recognizing that the massive industrial changes following the Civil War had created a

plethora of socioeconomic ills, Taft worked to expand the national government’s initiatives in the fields of trust-busting, land conservation, tariff reform, railroad regulation, and worker safety law. Burns offers a fuller understanding of Taft and his political project by emphasizing Taft’s belief that the Constitution could play a constructive role in American political life by empowering the government to act and by undergirding and protecting the reform legislation the government implemented. Moreover, Taft recognized that if the Constitution could come to the aid of progressivism, political reform might also redound to the benefit of the Constitution by showing its continued relevance and workability in modern America. Although Taft’s efforts to promote significant policy-level reforms attest to his progressivism, his major contribution to American political thought is his understanding of the US Constitution as a fundamental law, not a policy-oriented document. In many ways Taft can be thought of as an originalist, yet his originalism was marked by a belief in robust national powers. Taft’s constitutionalism remains relevant because while his principles seem foreign to modern legal discourse, his constitutional vision offers an alternative to contemporary political divisions by combining political progressivism-liberalism with constitutional conservatism.

Gaining Ground Nancy S. Seasholes 2018-04-20 Why and how Boston was transformed by landmaking. Fully one-sixth of Boston is built on made land. Although other waterfront cities also have substantial areas that are built on fill, Boston probably has more than any city in North America. In *Gaining Ground* historian Nancy Seasholes has given us the first complete account of when, why, and how this land was created. The story of landmaking in Boston is presented geographically; each chapter traces landmaking in a different part of the city from its first permanent settlement to the present. Seasholes introduces findings from recent archaeological investigations in Boston, and relates landmaking to the major historical developments that shaped it. At the beginning of the nineteenth century, landmaking in Boston was spurred by the rapid growth that resulted from the burgeoning China trade. The influx of Irish immigrants in the mid-nineteenth century prompted several large projects to create residential land—not for the Irish, but to keep the taxpaying Yankees from fleeing to the suburbs. Many landmaking projects were undertaken to cover tidal flats that had been polluted by raw sewage discharged directly onto them, removing the "pestilential exhalations" thought to cause illness. Land was also added for port developments, public parks, and transportation facilities, including the largest landmaking project of all, the airport. A separate chapter discusses the technology of landmaking in Boston, explaining the basic method used to make land and the changes in its various components over time. The book is copiously illustrated with maps that show the original shoreline in relation to today's streets, details from historical maps that trace the progress of landmaking, and historical drawings and photographs.

Politics and Political Change Robert I. Rotberg 2001 This collection shows how the study of past politics can be deepened by theory and practice from political science, sociology, and economics, and how the application of quantitative methods to received assumptions can expand our understanding of all political history.

Becoming a New Self Moshe Sluhovsky 2017 In *Becoming a New Self*, Moshe Sluhovsky examines the diffusion of spiritual practices among lay Catholics in early modern Europe. By offering a close examination of early modern Catholic penitential and meditative techniques, Sluhovsky makes the case that these practices promoted the idea of achieving a new self through the knowing of oneself. Practices such as the examination of conscience, general confession, and spiritual exercises, which until the 1400s had been restricted to monastic elites, breached the walls of monasteries in the period that followed. Thanks in large part to Franciscans and Jesuits, lay urban elites—both men and women—gained access to spiritual practices whose goal was to enhance

belief and create new selves. Using Michel Foucault's writing on the hermeneutics of the self, and the French philosopher's intuition that the early modern period was a moment of transition in the configurations of the self, Sluhovsky offers a broad panorama of spiritual and devotional techniques of self-formation and subjectivation.

Health and Disease in Human History Robert I. Rotberg 2000 This collection of essays suggests the great extent to which exploration, settlement, agricultural growth, colonization, urbanization, and even human stature were influenced by environmental and epidemiological realities, as well as by political and economic responses to those realities.

Oral History David K. Dunaway 1996-09-18 Oral History: An Interdisciplinary Anthology is a collection of classic articles by some of the best known proponents of oral history, demonstrating the basics of oral history, while also acting as a guidebook for how to use it in research. Added to this new edition is insight into how oral history is practiced on an international scale, making this book an indispensable resource for scholars of history and social sciences, as well as those interested in oral history on the avocational level. This volume is a reprint of the 1984 edition, with the added bonus of a new introduction by David Dunaway and a new section on how oral history is practiced on an international scale. Selections from the original volume trace the origins of oral history in the United States, provide insights on methodology and interpretation, and review the various approaches to oral history used by folklorists, historians, anthropologists, and librarians, among others. Family and ethnic historians will find chapters addressing the applications of oral history in those fields.

Quantitative Methods in the Humanities Claire Lemerrier 2019 This timely and lucid guide is intended for students and scholars working on all historical periods and topics in the humanities and social sciences--especially for those who do not think of themselves as experts in quantification, "big data," or "digital humanities." The authors reveal quantification to be a powerful and versatile tool, applicable to a myriad of materials from the past. Their book, accessible to complete beginners, offers detailed advice and practical tips on how to build a dataset from historical sources and how to categorize it according to specific research questions. Drawing on examples from works in social, political, economic, and cultural history, the book guides readers through a wide range of methods, including sampling, cross-tabulations, statistical tests, regression, factor analysis, network analysis, sequence analysis, event history analysis, geographical information systems, text analysis, and visualization. The requirements, advantages, and pitfalls of these techniques are presented in layperson's terms, avoiding mathematical terminology. Conceived primarily for historians, the book will prove invaluable to other humanists, as well as to social scientists looking for a nontechnical introduction to quantitative methods. Covering the most recent techniques, in addition to others not often enough discussed, the book will also have much to offer to the most seasoned practitioners of quantification.

The Origin and Prevention of Major Wars Robert Gilpin 1989-02-24 This analysis of the origins of major wars, since the development of the modern state system in Europe centuries ago, also considers the problems involved in preventing a contemporary nuclear war.

The Economy of Europe in an Age of Crisis, 1600-1750 Jan de Vries 1976-10-29 This book looks at the economic civilisation of Europe in the last epoch before the Industrial Revolution.

Thinking About History Sarah Maza 2017-09-18 What distinguishes history as a discipline from other fields of study? That's the animating question of Sarah Maza's *Thinking About History*, a general introduction to the field of history that revels in its eclecticism and highlights the inherent tensions and controversies that shape it. Designed for the classroom, *Thinking About History* is organized around big questions: Whose history do we write, and how does that affect what stories get told and how they are told? How did we come to view the nation as the inevitable context for history, and what happens when we move outside those boundaries? What is the relation among popular, academic, and public history, and how should we evaluate sources? What is the difference between description and interpretation, and how do we balance them? Maza provides choice examples in place of definitive answers, and the result is a book that will spark classroom discussion and offer students a view of history as a vibrant, ever-changing field of inquiry that is thoroughly relevant to our daily lives.

Rioting in America Paul A. Gilje 1999-03-22 " . . . a sweeping, analytical synthesis of collective violence from the colonial experience to the

present." —American Studies "Gilje has written 'the book' on rioting throughout American history." —The Historian ". . . a thorough, illuminating, and at times harrowing account of man's inhumanity to man." —William and Mary Quarterly " . . . fulfills its title's promise as an encyclopedic study . . . an impressive accomplishment and required reading for anyone interested in America's contentious past." —Journal of the Early Republic "Gilje has written a thought-provoking survey of the social context of American riots and popular disorders from the Colonial period to the late 20th century. . . . a must read for anyone interested in riots." —Choice In this wide-ranging survey of rioting in America, Paul A. Gilje argues that we cannot fully comprehend the history of the United States without an understanding of the impact of rioting. Exploring the rationale of the American mob brings to light the grievances that motivate its behavior and the historical circumstances that drive the choices it makes. Gilje's unusual lens makes for an eye-opening view of the American people and their history.

Civic Charity in a Golden Age Anne Elizabeth Conger McCants 1997 Using the Amsterdam Municipal Orphanage as a window through which readers can see the start of profound social and economic changes in early modern Amsterdam, *Civic Charity in a Golden Age* explores the connections between the developing capitalist economy, the functioning of the government, and the provision of charitable services to orphans in Amsterdam during the seventeenth and eighteenth centuries, the period of the city's greatest prosperity and subsequent decline. Anne McCants skillfully interprets details of the orphanage's expenditures, especially for food; its population; the work records of those who were reared there; and the careers of the regents who oversaw it. The establishment of the orphanage itself was called for by the changing economic needs of rapidly expanding commercial centers and the potential instability of a government that depended on taxes from a large, politically powerless segment of the population.

Capitalism and the Emergence of Civic Equality in Eighteenth-Century France William H. Sewell Jr. 2021-04-28 "William H. Sewell, Jr. turns to the experience of commercial capitalism to show how the commodity form abstracted social relations. The increased independence, flexibility, and anonymity of market relations made equality between citizens not only conceivable but attractive. Commercial capitalism thus found its way into the interstices of this otherwise rigidly hierarchical society, coloring social relations and paving the way for the establishment of civic equality"--

Promoting Interdisciplinarity in Knowledge Generation and Problem Solving Al-Suqri, Mohammed Nasser 2017-10-31 Interdisciplinary research is a method that has become efficient in accelerating scientific discovery. The integration of such processes in problem solving and knowledge generation is a vital part of learning and instruction. *Promoting Interdisciplinarity in Knowledge Generation and Problem Solving* is a pivotal reference source for the latest scholarly research on interdisciplinary projects from around the world, highlighting the broad range of circumstances in which this approach can be effectively used to solve problems and generate new knowledge. Featuring coverage on a number of topics and perspectives such as industrial design, ethnographic methods, and methodological pluralism, this publication is ideally designed for academicians, researchers, and students seeking current research on the promotion of interdisciplinarity for knowledge production.

On Deep History and the Brain Daniel Lord Smail 2008 When does history begin? What characterizes it? This book dissolves the logic of a beginning based on writing, civilization, or historical consciousness and offers a model for a history that escapes the continuing grip of the Judeo-Christian time frame. It lays out a new case for bringing neuroscience and neurobiology into the realm of history.

Military Medicine and the Making of Race Tim Lockley 2020-04-02 Demonstrates how Britain's black soldiers helped shape the very idea of race in the nineteenth century Atlantic world.

Philosophy of Biology Before Biology Cécilia Bognon-Küss 2019-02-11 The use of the term "biology" to refer to a unified science of life emerged around 1800 (most prominently by scientists such as Lamarck and Treviranus, although scholarship has indicated its usage at least 30-40 years earlier). The interplay between philosophy and natural science has also accompanied the constitution of biology as a science. *Philosophy of Biology Before Biology* examines biological and protobiological writings from the mid-eighteenth century to the early nineteenth century (from Buffon to Cuvier; Kant to Oken; and Kiemeyer) with two major sets of questions in mind: What were the distinctive conceptual features of the

move toward biology as a science? What were the relations and differences between the "philosophical" focus on the nature of living entities, and the "scientific" focus? This insightful volume produces a fresh but also systematic perspective both on the history of biology as a science and on the early versions of, in the 1960s in a post-positivist context, the philosophy of biology. It will appeal to students and researchers interested in fields such as history of science, philosophy of science and biology.

John Dee: Interdisciplinary Studies in English Renaissance Thought

Stephen Clucas 2006-06-18 Intellectual History and the Identity of John Dee In April 1995, at Birkbeck College, University of London, an interdisciplinary colloquium was held so that scholars from diverse fields and areas of expertise could exchange views on the life and work of John Dee. Working in a variety of fields – intellectual history, history of navigation, history of medicine, history of science, history of mathematics, bibliography and manuscript studies – we had all been drawn to Dee by particular aspects of his work, and participating in the colloquium was to confront other narratives about Dee's career: an experience which was both bewildering and instructive. Perhaps more than any other intellectual figure of the English Renaissance Dee has been fragmented and dispersed across numerous disciplines, and the various attempts to re-integrate his multiplied image by reference to a particular world-view or philosophical outlook have failed to bring him into focus. This volume records the diversity of scholarly approaches to John Dee which have emerged since the synthetic accounts of I. R. F. Calder, Frances Yates and Peter French. If these approaches have not succeeded in resolving the problematic multiplicity of Dee's activities, they will at least deepen our understanding of specific and local areas of his intellectual life, and render them more historiographically legible.

Industrialization and Urbanization Theodore K. Rabb 1981

Tangible Things Laurel Thatcher Ulrich 2015-02-06 In a world obsessed with the virtual, tangible things are once again making history. *Tangible Things* invites readers to look closely at the things around them, ordinary things like the food on their plate and extraordinary things like the transit of planets across the sky. It argues that almost any material thing, when examined closely, can be a link between present and past. The authors of this book pulled an astonishing array of materials out of storage—from a pencil manufactured by Henry David Thoreau to a bracelet made from iridescent beetles—in a wide range of Harvard University collections to mount an innovative exhibition alongside a new general education course. The exhibition challenged the rigid distinctions between history, anthropology, science, and the arts. It showed that object-centered inquiry inevitably leads to a questioning of categories within and beyond history. *Tangible Things* is both an introduction to the range and scope of Harvard's remarkable collections and an invitation to reassess collections of all sorts, including those that reside in the bottom drawers or attics of people's houses. It interrogates the nineteenth-century categories that still divide art museums from science museums and historical collections from anthropological displays and that assume history is made only from written documents. Although it builds on a larger discussion among specialists, it makes its arguments through case studies, hoping to simultaneously entertain and inspire. The twenty case studies take us from the Galapagos Islands to India and from a third-century Egyptian papyrus fragment to a board game based on the twentieth-century comic strip "Dagwood and Blondie." A companion website catalogs the more than two hundred objects in the original exhibition and suggests ways in which the principles outlined in the book might change the way people understand the tangible things that surround them.

Mobilities: New Perspectives on Transport and Society John Urry

2016-04-22 Bringing together the leading authors currently working at the intersection of social science and transport science, this volume provides a companion to the well-established and extensive international Transport and Society series. Each chapter, and the volume as a whole, offers closer and richer consideration of the issues, practices and structures of multiple mobilities which shape the current world but which have typically been overlooked or minimised. What this approach seeks to do is not only draw attention to many new areas of research and investigation relating to mobile lives, but also to point to new theories and methods by which such lives have to be researched and examined. Such new theories and methods are relevant both to rethinking 'transport' studies as such but are also recasting 'societal' studies as 'transport' so that it comes out of the ghetto and enters mainstream social science.

King and Emperor Janet L. Nelson 2021-06-08 Charles I, often known as Charlemagne, is one of the most extraordinary figures ever to rule an empire. Driven by unrelenting physical energy and intellectual curiosity, he was a man of many parts, a warlord and conqueror, a judge who promised 'for each their law and justice', a defender of the Latin Church, a man of flesh-and-blood. In the twelve centuries since his death, warfare, accident, vermin, and the elements have destroyed much of the writing on his rule, but a remarkable amount has survived. Janet Nelson's wonderful new book brings together everything we know about Charles, sifting through the available evidence, literary and material, to paint a vivid portrait of the man and his motives. Charles's legacy lies in his deeds and their continuing resonance, as he shaped counties, countries, and continents, founded and rebuilt towns and monasteries, and consciously set himself up not just as King of the Franks, but as the head of the renewed Roman Empire. His successors—in some ways even up to the present day—have struggled to interpret, misinterpret, copy, or subvert his legacy.

Evangelicals Incorporated Daniel Vaca 2019-12-03 American evangelicalism is big business. It is not, Daniel Vaca argues, just a type of conservative Protestantism that market forces have commodified. Rather evangelicalism is an expressly commercial practice, in which the faithful participate, learn, and develop religious identities by engaging corporations and commercial products.

The Children of Eve Louis P. Cain 2011-11-30 *The Children of Eve* is the first book to bring together general material about population and well-being in a single volume. It presents a world history of demographic and economic change that ranges broadly over time and space and which emphasizes the commonality of human experience. The first book to put together material about population and well-being in a single volume Emphasizes the formative population history of Europe and North America over the years since the Middle Ages, and includes discussions of Asia and the southern hemisphere The authors successfully maintain the difficult balance of addressing complex issues in a style that doesn't over-simplify the subject, whilst upholding an approach that is accessible to general readers and students Designed to work as both a stand alone text or a supplement to textbooks in any number of courses

Placing Names Merrick Lex Berman 2016-08-08 Well before the innovation of maps, gazetteers served as the main geographic referencing system for hundreds of years. Consisting of a specialized index of place names, gazetteers traditionally linked descriptive elements with topographic features and coordinates. *Placing Names* is inspired by that tradition of discursive place-making and by contemporary approaches to digital data management that have revived the gazetteer and guided its development in recent decades. Adopted by researchers in the Digital Humanities and Spatial Sciences, gazetteers provide a way to model the kind of complex cultural, vernacular, and perspectival ideas of place that can be located in texts and expanded into an interconnected framework of naming history. This volume brings together leading and emergent scholars to examine the history of the gazetteer, its important role in geographic information science, and its use to further the reach and impact of spatial reasoning into the digital age.

Social Mobility and Modernization Robert I. Rotberg 2000-10-10 The essays in this book examine how the West modernized and what that modernization meant to human society, particularly in Western Europe and the United States. Within that frame are several distinct subthemes: the process of industrialization in Europe and elsewhere; social mobility, class structures, and class differences; social unrest and the stresses of modernization and industrialization; economic and social equality and inequality and their markers; the role of women in modernization; and the origins of nationalism. The book's chapters discuss these issues from medieval times through the twentieth century, with particular focus on the eighteenth and nineteenth centuries. Critical Medical Anthropology Jennie Gamlin 2020-03-12 Critical Medical Anthropology presents inspiring work from scholars doing and engaging with ethnographic research in or from Latin America, addressing themes that are central to contemporary Critical Medical Anthropology (CMA). This includes issues of inequality, embodiment of history, indigeneity, non-communicable diseases, gendered violence, migration, substance abuse, reproductive politics and judicialisation, as these relate to health. The collection of ethnographically informed research, including original theoretical contributions, reconsiders the broader relevance of CMA perspectives for addressing current global healthcare challenges from and of Latin America. It includes work spanning four countries in Latin America (Mexico, Brazil, Guatemala and Peru) as well as the trans-migratory contexts they connect and are defined by. By drawing on diverse social practices, it addresses challenges of central relevance to medical anthropology and global health, including reproduction and maternal health, sex work, rare and chronic diseases, the pharmaceutical industry and questions of agency, political economy, identity, ethnicity, and human rights.
