Themes, Issues and Debates in Psychology Richard Gross 2023-06-26

Themes, Issues and Debates in Psychology presents an integrated view of Psychology by identifying underlying themes (such as the scientific nature of Psychology, cultural and gender differences), issues (ethical, methodological and conceptual), and debates (such as heredity vs. environment, free will vs. determinism, normality vs. abnormality) which permeate the discipline as a whole. The text adopts a critical approach to 'mainstream Psychology', attempting to identify and challenge some of the underlying assumptions that are traditionally made about 'human nature' and how it can be investigated in ways based on the scientific study of the natural world. What makes Psychology unique is the view of Psychologists as part of their own subject-matter: trying to study other people cannot be done by copying the methods of the physicist or chemist. Psychology draws on and brings together a number of different theories and methodologies from a wide range of other disciplines, including philosophy, biology, anthropology and sociology. Themes, Issues and Debates in Psychology also includes chapters on Parapsychology, Positive Psychology and Religion and Spirituality, which are rarely found together in a single text. Not only are these not

mainstream, but they highlight some of the themes, issues and debates discussed in earlier chapters. The topics in this fifth edition of this book are inflected by a new concern with decolonizing the curriculum, and discussions of cultural and gender-based issues are integrated into all aspects of the text to offer a new and critical perspective on issues such as political and scientific colonialism. Additionally, the text features 'Question Time' breaks that relate to methodological, theoretical and other issues; these are all aimed at helping the reader assimilate the material. Some of the issues raised could form the basis of seminar papers/discussions. Themes, Issues and Debates in Psychology is ideal reading for all students and is relevant to undergraduate courses in psychology.

The Neurology of Religion Alasdair Coles 2019-11-07 Examines what can be learnt about the brain mechanisms underlying religious practice from studying people with neurological disorders.

Epimethean Imaginings Raymond Tallis 2014-09-11 These essays, written in the spirit of Goethe's Epimetheus who "traces the quick deed to the dim realm of form-combining possibilities", display the depth and breadth of Tallis's fascination with our lives. Whether discussing philosophical "hardy perennials" like time, or a mundane artefact like

ink, Tallis challenges us to think differently about who we are and why we are. The first part of the book - Analysis - dives into the deep-end to explore some of the big questions in philosophy: perception, knowledge and belief; time; the relationship between mathematics and reality; and probability and causation. The middle section - Tetchy Interludes - takes a wry look at some aspects of contemporary art; stupidity (including the author's own); and Christmas. The third part - Celebration - is more experimental in both its subject matter and treatment. It celebrates the complexity of ordinary, everyday consciousness by contemplating the miracle of speech, artefacts that have transformed our lives (and what they reveal about our cognition) such as the wheel, the sail, and ink; and 'snapshots' of the author's own consciousness on an ordinary day, of past consciousness, as captured in historical memory. Notwithstanding their diversity in theme and style, these essays share the common aim of discovering and celebrating the submerged riches in the "quick deeds" of our everyday lives and perceptions.

Reconciling Ancient and Modern Philosophies of History Aaron

Turner 2020-10-26 The distinction between ancient and modern modes of historical thought is characterized by the growing complexity of the discipline of history in modernity. Consequently, the epistemological and methodological standard of ancient historiography is typically held as inferior against the modern ideal. This book serves to address this apparent deficit. Its scope is three-fold. Firstly, it aims at encountering ancient modes of historical and historiographical thought within the province of their own horizon. Secondly, this book considers the possibility of a dialogue between ancient and modern philosophies of history concerning the influence of ancient historical thought on the development of modern philosophy of history and the utility of modern philosophy of history in the interpretation of ancient historiography. Thirdly, this book explores the continuities and discontinuities in historical method and thought from antiquity to modernity. Ultimately, this volume demonstrates the necessity of re-evaluating our assumptions about the relation of ancient and modern historical thought and lays the groundwork for a more fruitful dialogue in the future.

Hand Tallis Raymond Tallis 2019-08-07 What are the origins of human difference? The Hand, which is the first part of a bold philosophical inquiry into the nature of the difference between human beings and other animals, argues that it is the result of a complex sequence of events which began several million years ago with the evolution of the human hand. Possession of a fully developed hand profoundly transformed the relationship of the human being to its own body, thus altering the relationship between humans and the natural world. The interaction of the hand with the rest of the body brought about self-consciousness and laid the foundations for the unique sense of agency that is experienced by humans. Crucially, the hand inspired the tool-use that has come to dominate human life and which has led to the emergence of the complex symbolic systems - most importantly language - that underpin civilisation. The book also celebrates the hand in human life: the almost miraculous complexity of its manipulative, exploratory and communicative functions. Raymond Tallis combines philosophical reflection with a light-hearted look at gestures, the role of each finger, the origins of numbers - and the case for and against what he names 'handkind'. The Hand is the first of three volumes. The other titles are I Am: A Philosophical Inquiry into First-Person Being and The Knowing Animal: A Philosophical Inquiry into Truth and Knowledge.

Identity Giselle Walker 2010-11-04 Aspects of identity explored by eight distinguished authors from different academic disciplines.

History and Theory of Knowledge Production Rajan Gurukkal 2018-10-16 Who decides what should be recognized as knowledge? What forces engender knowledge? How do certain forms of it acquire precedence over the rest, and why? Exploring these fundamental questions, this book provides an introductory outline of the vast history of knowledge systems under the broad categories of European and non-European, specifically Indian. It not only traces ontology and epistemology in spatio-temporal terms, but also contextualizes methodological development by comparing Indian and European systems of knowledge and their methods of production as well as techniques ensuring reliability. Knowledge cannot have a history of its own, independent of social history. Therefore, using

a vast array of sources, including Greek, Prakrit, Chinese, and Arab texts, the book situates the history of knowledge production within the matrix of multiple socio-economic and politico-cultural systems. Further, the volume also analyses the process of the rise of science and new science and reviews speculative thoughts about the dynamics of the subatomic micro-universe as well as the mechanics of the galactic macro-universe.

Research Skills for Management Studies Alan Berkeley Thomas 2004-08-02 The recent growth of interest in the systematic study of management has transformed a once neglected area of research into one that now attracts a huge number of postgraduate students. Despite this, there has been a distinct lack of research guides tailored specifically for management studies. Designed as a comprehensive introduction to the main phases of a research project, this textbook fills that void. It leads students from the very first stage of initiation through to final publication, considering the nature of research skills and the fundamental elements of the research process, whilst exploring the institutional context in which management research is carried out. Taking current debates and the surrounding philosophical and strategic issues in hand, this book combines the key theories with the best practical advice to offer a completely rounded introduction to the topic. It includes guidance and specific reference to real management research projects, as well as case examples, activities and further reading lists, and is essential reading for anyone undertaking a management studies research project.

Film, Art, and the Third Culture Murray Smith 2017 In the mid-1950s C.P. Snow began his campaign against the 'two cultures' - the debilitating divide, as he saw it, between traditional 'literary intellectual' culture, and the culture of the sciences, urging in its place a 'third culture' which would draw upon and integrate the resources of disciplines spanning the natural and social sciences, the arts and the humanities. Murray Smith argues that, with the ever-increasing influence of evolutionary theory and neuroscience, and the pervasive presence of digital technologies, Snow's challenge is more relevant than ever.

Working out how the 'scientific' and everyday images of the world 'hang' together is no simple matter. In *Film, Art, and the Third Culture*, Smith explores this question in relation to the art, technology, and science of film in particular, and to the world of the arts and aesthetic activity more generally. In the first part of his book, Smith explores the general strategies and principles necessary to build a 'third cultural' or naturalized approach to film and art - one that roots itself in an appreciation of scientific knowledge and method. Smith then goes on to focus on the role of emotion in film and the other arts, as an extended experiment in the 'third cultural' integration of ideas on emotion spanning the arts, humanities and sciences. While acknowledging that not all of the questions we ask are scientific in nature, Smith contends that we cannot disregard the insights wrought by taking a naturalized approach to the aesthetics of film and the other arts.

The Oxford Handbook of the Human Essence Martijn van Zomeren 2018 Advances in social-psychological theorizing and research suggest that humans can be viewed as biological beings as well as cultural creatures, rational reasoners as well as emotional enigmas, moral minds as well as amoral agents. Edited by Martijn van Zomeren and John F. Dovidio, this handbook expertly articulates both what social psychology can tell us about the human essence, and the astonishing range of perspectives reflected within this field.

Reflections of a Metaphysical Flaneur Raymond Tallis 2014-09-11 These essays from one of our most stimulating thinkers showcase Tallis's infectious fascination, indeed intoxication, with the infinite complexity of human lives and the human condition. In the title essay, we join Tallis on a stroll around his local park - and the intricate passages of his own consciousness - as he uses the motif of the walk, the amble, to occasion a series of meditations on the freedoms that only human beings possess. In subsequent essays, the flaneur thinks about his brain, his relationship to the rest of the animal kingdom, his profession of medicine and about the physical world and the claims of physical science to have rendered philosophical reflection obsolete. Taken together the essays continue Tallis's mission to elaborate a vision of humanity that rejects religious

myths while not succumbing to scientism or any other form of naturalism. Written with the author's customary intellectual energy and vigour these essays provoke, move and challenge us to think differently about who we are and our place in the material world.

The Knowing Animal Raymond Tallis 2005 Completes a trilogy that aims to revolutionise our understanding of what it is to be a human being without recourse to theology and supernatural explanations on the one hand or scientism and naturalistic explanations on the other.

The Kingdom of Infinite Space Raymond Tallis 2014-05-14 In this pathbreaking book, one of Britain's most eloquent and original thinkers writes about the head, what happens in it, and how it is and is not connected to our sense of identity and consciousness. Blending science, philosophy, and humor, Raymond Tallis examines the extraordinarily complex relationship we have with our heads. His aim, as he says, is to turn readers into astonished tourists of the piece of the world that is closest to them, so they never again take for granted the head that looks at them from the mirror. Readers will delight that this is precisely what he accomplishes. The voyage begins with a meditation on the self-portrait of a mirror image, followed by a consideration of the head's various secretions. Tallis contemplates the air we exhale; the subtle meanings of nods, winks, and smiles; the mysteries of hearing, taste, and smell. He discusses the metaphysics of the gaze, the meaning of kissing, and the processes by which the head comes to understand the world. Along the way he offers intriguing digressions on such notions as having and using one's head, and enjoying and suffering it. Tallis concludes with his thoughts on the very thing the reader's head has been doing throughout the book: thinking.

Ciferae Tom Tyler 2012 A provocative investigation into animals, hands, and human identity in Western philosophy

Curriculum Martin Robinson 2019-09-20 Martin Robinson's Curriculum: Athena versus the machine explores the educational value of a curriculum rooted in the pursuit of wisdom and advocates the

enshrinement of such a curriculum as the central concern of an academic institution. Rather than being seen as a data-driven machine, a school should be viewed as a place that enables children to develop thoughtful perspectives on the world, through which they can pursue wisdom and be free to join in with the ancient and continuing conversation: 'What is it to be human?' Teachers need to be liberated from policy-led prescription in order to design curricula which bring the subjects being studied, rather than the blind pursuit of measurable outcomes, to the foreground of the school's teaching and learning agenda. In Curriculum, Martin Robinson explores how this can be achieved. The Machine demands data, order and regulation; Athena is the goddess of philosophy, courage and inspiration. An Athena curriculum celebrates wisdom and skills, and considers why it seeks to transmit the knowledge that it does. In this book, Martin examines how we can construct a curriculum that will allow liberal education to flourish. Anti gimmick and pro wisdom, the principles that he advocates will make a big difference to teachers' and pupils' lives, and will help to ensure that our young adults are better educated. Suitable for teachers, school leaders and policy makers.

Michelangelo's Finger: An Exploration of Everyday Transcendence Raymond Tallis 2010-09-07 A renowned British public intellectual illustrates how our unique ability to point the index finger has shaped our amazing evolutionary pathway as humans. In this startlingly original and persuasive book, Raymond Tallis shows that it is easy to underestimate the influence of small things in determining what manner of creatures humans are. He argues that the independent movement of the human index finger is one such easily overlooked factor. Indeed, not for nothing is the index finger called the "forefinger." It is the finger we most naturally deploy when we want to pry objects out of small spaces, but it plays a far more significant role in an action unique to us among primates: pointing. Tallis argues that it is through pointing that the index finger made a significant contribution to the development of humans and to the creation of a human world separate from the rest of the natural world. Observing the ceiling of the Sistine Chapel and the hugely familiar and awkward encounter between Michelangelo's God and Man through

their index fingers, Tallis identifies the artist's intuitive awareness of the central role of the index finger in making us unique. Just as the reaching index fingers of God and Man are here made central to the creation of our kind, so Tallis believes that the seemingly simple act of pointing, which is used in a wide variety of ways, is central to our extraordinary evolution.

Hippocratic Oaths Raymond Tallis 2015-01-01 In this book, the physician and philosopher Raymond Tallis yokes together his diverse intellectual interests to address important questions about our well-being. In a series of stimulating and impassioned arguments, he establishes the truth about, among many other things, recent health scares, explains why patients compete for our doctors' and nurses' time; why the exploding popularity of alternative therapies is actually bad for our health; and how one man's view of the MMR vaccine influenced a nation. This is the summation of a lifetime's thought and medical practice, by one of Britain's most original thinkers. It will, quite simply, change for ever the way we think about ourselves and our health.

The Hand Raymond Tallis 2003 What are the origins of human difference? As this philosophical exploration shows, the difference between human beings and other animals is the result of a complex sequence of events which began several million years ago with the evolution of the human hand.

Knowledge and Knowledge Systems: Learning from the Wonders of the Mind Geisler, Eliezer 2007-09-30 Previous research in the knowledge management and information systems fields simply define knowledge by a few categories, and then describe knowledge systems and their usage and the difficulties with them. Knowledge and Knowledge Systems: Learning from the Wonders of the Mind starts from the beginning: where and how knowledge is formed and how it can be measured, describing humans and their knowledge path from conception and birth to maturity.

Beyond Women's Words Katrina Srigley 2018-05-01 Beyond Women's Words unites feminist scholars, artists, and community activists working with the stories of women and other historically marginalized subjects to address the contributions and challenges of doing feminist oral history.

Feminists who work with oral history methods want to tell stories that matter. They know, too, that the telling of those stories—the processes by which they are generated and recorded, and the different contexts in which they are shared and interpreted—also matters—a lot. Using Sherna Berger Gluck and Daphne Patai's classic text, *Women's Words*, as a platform to reflect on how feminisms, broadly defined, have influenced, and continue to influence, the wider field of oral history, this remarkable collection brings together an international, multi-generational, and multidisciplinary line-up of authors whose work highlights the great variety in understandings of, and approaches to, feminist oral histories. Through five thematic sections, the volume considers Indigenous modes of storytelling, feminism in diverse locales around the globe, different theoretical approaches, oral history as performance, digital oral history, and oral history as community-engagement. Beyond *Women's Words* is ideal for students of oral history, anthropology, public history, women's and gender history, and Women's and Gender Studies, as well as activists, artists, and community-engaged practitioners.

I Am Raymond Tallis 2004 This is the second volume of a three part work which offers a new approach to philosophical questions about selfhood, identity, freedom of the will, agency, knowledge and truth.

Meanings of Pain Simon van Rysewyk 2017-02-07 Although pain is widely recognized by clinicians and researchers as an experience, pain is always felt in a patient-specific way rather than experienced for what it objectively is, making perceived meaning important in the study of pain. The book contributors explain why meaning is important in the way that pain is felt and promote the integration of quantitative and qualitative methods to study meanings of pain. For the first time in a book, the study of the meanings of pain is given the attention it deserves. All pain research and medicine inevitably have to negotiate how pain is perceived, how meanings of pain can be described within the fabric of a person's life and neurophysiology, what factors mediate them, how they interact and change over time, and how the relationship between patient, researcher, and clinician might be understood in terms of meaning. Though meanings of pain are not intensively studied in contemporary

pain research or thoroughly described as part of clinical assessment, no pain researcher or clinician can avoid asking questions about how pain is perceived or the types of data and scientific methods relevant in discovering the answers.

The Mystery and Agency of God Frank G. Kirkpatrick 2014 Attempting to avoid the trappings of a radical distantiation and the immanent collapse of God and world, Frank Kirkpatrick argues for a theory of agency and action that preserves the mystery of God while providing a philosophically robust account of divine action in created time and space. Analytic Philosophy of Clinical and Community Medicine Lucien Karhausen 2023-05-28 The present volume is about philosophy of medicine and integrates philosophy of medicine as a chapter of philosophy of science. It is neither about bioethics, nor about the history of medicine, but it is comprehensive and encompasses the whole field of medicine including psychiatry. It is grounded on a first-order standpoint, and it strives to stay close to clinical or community medicine: it bestows an epistemological bottom-up account. It is not a review of the literature, and it is not intended to frame the debates, or to analyse and compare the various and substantial number of viewpoints although some authors' account may form the basis of the book when they fit into the development of its philosophical view of medicine.

Science and the Self Ian James Kidd 2015-08-27 Mary Midgley is one of the most important moral philosophers working today. Over the last thirty years, her writings have informed debates concerning animals, the environment and evolutionary theory. The invited essays in this volume offer critical reflections upon Midgley's work and further developments of her ideas. The contributors include many of the leading commentators on her work, including distinguished figures from the disciplines of philosophy, biology, and ethology. The range of topics includes the moral status of animals, the concept of wickedness, science and mythology, Midgley's relationship to modern moral philosophy, and her relationship with Iris Murdoch. It also includes the first full bibliography of Midgley's writings. The volume is the first major study of its kind and brings together contributions from the many disciplines which Midgley's work

has influenced. It provides a clear account of the themes and significance of her work and its implications for ongoing debates about our understanding of our place within the world.

The Seductions of Darwin Matthew Rampley 2017-01-05 The surge of evolutionary and neurological analyses of art and its effects raises questions of how art, culture, and the biological sciences influence one another, and what we gain in applying scientific methods to the interpretation of artwork. In this insightful book, Matthew Rampley addresses these questions by exploring key areas where Darwinism, neuroscience, and art history intersect. Taking a scientific approach to understanding art has led to novel and provocative ideas about its origins, the basis of aesthetic experience, and the nature of research into art and the humanities. Rampley's inquiry examines models of artistic development, the theories and development of aesthetic response, and ideas about brain processes underlying creative work. He considers the validity of the arguments put forward by advocates of evolutionary and neuroscientific analysis, as well as its value as a way of understanding art and culture. With the goal of bridging the divide between science and culture, Rampley advocates for wider recognition of the human motivations that drive inquiry of all types, and he argues that our engagement with art can never be encapsulated in a single notion of scientific knowledge. Engaging and compelling, *The Seductions of Darwin* is a rewarding look at the identity and development of art history and its complicated ties to the world of scientific thought.

Aping Mankind Raymond Tallis 2016-04-14 Neuroscience has made astounding progress in the understanding of the brain. What should we make of its claims to go beyond the brain and explain consciousness, behaviour and culture? Where should we draw the line? In this brilliant critique Raymond Tallis dismantles "Neuromania", arising out of the idea that we are reducible to our brains and "Darwinitis" according to which, since the brain is an evolved organ, we are entirely explicable within an evolutionary framework. With precision and acuity he argues that the belief that human beings can be understood in biological terms is a serious obstacle to clear thinking about what we are and what we might

become. Neuromania and Darwinitis deny human uniqueness, minimise the differences between us and our nearest animal kin and offer a grotesquely simplified account of humanity. We are, argues Tallis, infinitely more interesting and complex than we appear in the mirror of biology. Combative, fearless and thought-provoking, *Aping Mankind* is an important book and one that scientists, cultural commentators and policy-makers cannot ignore. This Routledge Classics edition includes a new preface by the Author.

Cognitive Media Theory Ted Nannicelli 2014-03-26 Across the academy, scholars are debating the question of what bearing scientific inquiry has upon the humanities. The latest addition to the AFI Film Readers series, *Cognitive Media Theory* takes up this question in the context of film and media studies. This collection of essays by internationally recognized researchers in film and media studies, psychology, and philosophy offers film and media scholars and advanced students an introduction to contemporary cognitive media theory—an approach to the study of diverse media forms and content that draws upon both the methods and explanations of the sciences and the humanities. Exploring topics that range from color perception to the moral appraisal of characters to our interactive engagement with videogames, *Cognitive Media Theory* showcases the richness and diversity of cognitivist research. This volume will be of interest not only to students and scholars of film and media, but to anyone interested in the possibility of a productive relationship between the sciences and humanities.

An Introduction to Personalism Juan Manuel Burgos 2018-02-09 Much has been written about the great personalist philosophers of the 20th century, but few books cover the personalist movement as a whole. *An Introduction to Personalism* fills that gap, and presents an engaging anthropological vision capable of taking the lead in the debate about the meaning of human existence and of winning hearts and minds for the cause of the dignity of every person.

The Routledge Handbook of Philosophy of Pain Jennifer Corns 2017-07-14 The phenomenon of pain presents problems and puzzles for philosophers who want to understand its nature. Though pain might

seem simple, there has been disagreement since Aristotle about whether pain is an emotion, sensation, perception, or disturbed state of the body. Despite advances in psychology, neuroscience, and medicine, pain is still poorly understood and multiple theories of pain abound. The Routledge Handbook of Philosophy of Pain is an outstanding reference source to the key topics, problems, and debates in this exciting and interdisciplinary subject and is the first collection of its kind. Comprising over thirty chapters by a team of international contributors the Handbook is divided into nine clear parts: Modeling pain in philosophy Modeling pain in neuroscience Modeling pain in psychology Pain in philosophy of mind Pain in epistemology Pain in philosophy of religion Pain in ethics Pain in medicine Pain in law As well as fundamental topics in the philosophy of pain such as the nature, role, and value of pain, many other important topics are covered including the neurological pathways involved in pain processing; biopsychosocial and cognitive-behavioural models of pain; chronic pain; pain and non-human animals; pain and knowledge; controlled substances for pain; pain and placebo effects; and pain and physician-assisted suicide. The Routledge Handbook of Philosophy of Pain is essential reading for students and researchers in philosophy of mind, philosophy of psychology and ethics. It will also be very useful to researchers of pain from any field, especially those in psychology, medicine, and health studies.

Handbook of Psychology, History of Psychology Donald K. Freedheim 2003-01-03 Includes established theories and cutting-edge developments. Presents the work of an international group of experts. Presents the nature, origin, implications, an future course of major unresolved issues in the area.

In Defence of Wonder and Other Philosophical Reflections Raymond Tallis 2014-09-03 In these lively and provocative essays, philosopher, polymath and all-round intellectual heavyweight, Raymond Tallis debunks commonplace truths, exposes woolly thinking and pulls the rug from beneath a wide range of commentator whether scientist, theologian, philosopher or pundit. Tallis takes to task much of contemporary science and philosophy, arguing that they are guilty of

taking us down ever narrowing conduits of problem solving that only invite ever more complex responses and in doing so have lost sight of "wonder" - the metaphysical intoxication that first gave birth to philosophy 2,500 years ago. Tallis tackles some meaty topics - memory, time, language, truth, fiction, consciousness - but always with his characteristic verve, insight and wit. These essays showcase Tallis's skill for getting to the heart of the matter and challenging us to see, and wonder, in different ways. Wonder is the proper state of humankind, and as these essays show it has no more forceful a champion than Raymond Tallis.

Why the Mind Is Not a Computer Raymond Tallis 2013-08-21 The equation "Mind = Machine" is false. This pocket lexicon of "neuromythology" shows why. Taking a series of key words such as calculation, language, information and memory, Professor Tallis shows how their misuse has lured a whole generation into accepting the computational model of the mind. First of all these words were used literally in the description of the human mind. Then computer scientists applied them metaphorically to the workings of their machines. And finally, their metaphorical status forgotten, the use of the terms was called as evidence of artificial intelligence in machines and the computational nature of conscious thought.

Hunger Raymond Tallis 2014-12-05 Understanding hunger is the key to understanding ourselves. While they seem the most obvious things about us, our hungers are also deeply mysterious, arising out of, and casting light on, the unique character of human consciousness. In humans, physiological need is transformed into a multitude of needs that are remote from organic necessity. Even first-level biological hunger is experienced differently in humans; and little in human feeding behaviour has any parallel in the animal kingdom. In this book, Ray Tallis takes us through the different levels of our hunger. Out of our primary appetites arise a myriad of pleasures and tastes that are elaborated in second-level hedonistic hungers creating new values. The evolution of appetite into desire opens the way to social hungers such as the hunger for acknowledgement. Awareness of death awakens a further level of hunger

for something that lies beyond the pell-mell of successive experiences leading towards extinction. The art of living is the art of managing our hungers.

Prenatal and Preimplantation Diagnosis Joann Paley Galst 2015-08-26 This book aims to expand the awareness and understanding of the emotional sequelae of prenatal/preimplantation diagnosis, prenatal decision-making, pregnancy interruption for fetal anomaly, multifetal reduction for high-order multifetal pregnancies and preimplantation choices involving the selection of embryos. Featuring a multi-disciplinary approach, it examines prenatal and preimplantation diagnosis from medical, legal, ethical and psychosocial perspectives. Prenatal and Preimplantation Diagnosis is an excellent resource for obstetricians, reproductive endocrinologists, clinical geneticists, genetic counselors and mental health professionals seeking to better support patients faced with difficult choices.

The Enduring Significance of Parmenides Raymond Tallis 2007-11-29 Parmenides of Elea is widely regarded as the most important of the Presocratic philosophers and one of the most influential thinkers of all time. He is famous, or notorious, for asserting that change, movement, generation and perishing are illusions arising from our senses, that past and future do not exist, and that the universe is a single, homogeneous, static sphere. This picture of the world is not only contrary to the experience of every conscious moment of our lives, it is also unthinkable, since thoughts themselves are events that come into being and pass away. In this important new book, Raymond Tallis critically examines Parmenides' conclusions and argues that, although his views have had a huge influence, they are in fact the result of a failure to allow for possibility, for what-might-be, which neither is nor is not. Without possibility, there is neither truth nor falsehood. Tallis explores the limits of Parmenides ideas, his influence on Plato and, through him, Aristotle and finally, why Parmenides is still relevant today.
