Holes in the Sky Louis MacNeice 2017-10-28

Excerpt from *Holes in the Sky: Poems, 1944-1947* Early one morning to walk through the fire Dodging the pythons that leaked on the pavements With tinkle of glasses and tangle of wire; When grimed to the eyebrows I met an old fireman Who looked at me wryly and thus did he say. Eye on the Sky Donald E. Osterbrock 2010-04-12 The world's first mountain-top observatory and America's first big-science research center, Lick Observatory exemplifies astronomy's dramatic development in the past century. A dedicated

Confederate naval officer and his jack-of-all-trades foreman used the bequest of a miserly California eccentric to transform an isolated mountain peak into the world's premier research observatory. Its first staff included a director from West Point and three of the outstanding astronomers of their time. Since its dedication in 1888, Lick Observatory has been the site of many of the most important discoveries in astronomy. *Eye on the Sky* presents Lick Observatory from the point of view of the people who breathed life into its giant telescopes. Their community was both constant and constantly transformed, shaped by workers famous and unknown who made it their home. The authors also explain in terms anyone can understand the laboratory advances that were adapted to telescopes to make them more powerful, and the conceptual breakthroughs that discoveries at the telescope helped bring about. The men and women who went to the top of Mount Hamilton in search of greater knowledge of the skies helped to change our conception of the universe and our place in it. They were people with personal and political lives as well as scientific careers, and their story illuminates a time and a place where foundations were laid for the discoveries of the next century.

The Skip Rock Collection: Skip Rock

Shallows / Tattler's Branch / Buttermilk Sky Jan Watson 2017-09-05 This Collection bundles 3

of Jan Watson's popular historical Appalachian novels into one e-book for a great value! Skip Rock Shallows Lilly Gray Corbett has just graduated from medical school and decided to accept an internship in the coal camp of Skip Rock, Kentucky. Her beau, Paul, is doing his residency in Boston and can't understand why Lilly would choose to work in a backwater town. But having grown up in the mountains, Lilly is drawn to the stubborn, superstitious people she encounters in Skip Rock—a town where people live hard and die harder and where women know their place. Lilly soon learns she has a lot to overcome, but after saving the life of a young miner, she begins to earn the residents' trust. As Lilly becomes torn between joining Paul in Boston and her love for the people of Skip Rock, she crosses paths with a handsome miner—one who seems oddly familiar. Her attraction for him grows, even as she wrestles with her feelings and wonders what he's hiding. Tattler's Branch Lilly Corbett Still has grown to love her life as the small-town doctor of Skip Rock, a tiny coal community in the Kentucky mountains. Though her husband, Tern, is away for a few months at a mining job, Lilly has her hands full with her patients and her younger sister visiting for the summer. Lilly turns to her good friend and neighbor, Armina, to help keep things in order—until a mysterious chain of events leaves Armina bedridden and an abandoned baby on her doorstep. Lilly works to uncover the truth, unaware of what a mess she's found herself in until a break-in at her clinic puts her on high alert. As she struggles between what is right and what is safe, Lilly must discover the strength of her resilient country neighbors, her God, and herself. Buttermilk Sky Weary of the expectations imposed on her by her strict upbringing, eighteen-year-old Mazy Pelfrey prepares to leave her home in the Kentucky mountains for the genteel city of Lexington, where she'll attend secretarial school. She knows her life is about to change—and only for the better. Everything will be blue skies from now on. But business school is harder than she thought it would be and the big city not as friendly, until she meets a charming young man from a wealthy family, Loyal Chambers. When Loyal sets his sights on her, Mazy begins to see that everything she'd ever wished to have is

right before her eyes. The only hindrance to her budding romance is a former beau, Chanis Clay, the young sheriff she thought she'd left firmly behind. Danger rumbles like thunder on a high mountain ridge when Mazy's cosseted past collides with her clouded future and forces her to come to terms with what she really wants.

First published in 1985. Exactly 20 years have passed since the first edition of this text appeared, in 1965. During this period, the author has gathered feedback from professional film-making circles. This fourth revision introduces new information in nearly all chapters. 130 new illustrations have been added, many of them illustrating feature films which are currently in release. The bibliography has also been enlarged considerably. The contributions of the visual-effects cinematographer have always been valued highly within the theatrical motion-picture industry. Because of their work, film producers have been able to endow their pictures with considerable 'production value' which the budget could not otherwise sustain.

As one of the oldest scientific institutions in the United States, the US Naval Observatory has a rich and colourful history. This volume is, first and foremost, a story of the relations between space, time and navigation, from the rise of the chronometer in the United States to the Global Positioning System of satellites, for which the Naval Observatory provides the time to a billionth of a second per day. It is a story of the history of technology, in the form of telescopes, lenses, detectors, calculators, clocks and computers over 170 years. It describes how one scientific institution under government and military patronage has contributed, through all the vagaries of history, to almost two centuries of unparalleled progress in astronomy. *Sky and Ocean Joined* will appeal to historians of science, technology, scientific institutions and American

science, as well as astronomers, meteorologists and physicists.

The Sky-Man (Classic Reprint) Henry Kitchell Webster 2017-09-18 Excerpt from *The Sky-Man* Cayley would not say that he had learned to fly he would still insist that he was learning. And, in a sense, this was true. Almost every day cinder, gull, cormorant or albatross taught him some new trick of technique in steering, soaring or wheeling, perhaps, in a tricky cross-current of air. Even that fulmar, which had fled in such ungainly haste. Had given him a new idea in aerostatics to amuse himself with. But for all practical purposes Cayley had learned to fly. The great fan-driven air ship, 100 feet from tip to tip, which had long lain idle on his ranch at Sandoval, would probably never leave its house again. It had done yeoman service. Without its powerful propellers, for a last resource, Cayley would never have been able to try the experiments and get the practice which had given him the air for his natural element. He had outgrown it. He had no more need of motors or whirling fans. The force of gravity, the force of the breeze and the perfectly coordinated muscles of his own body gave him all the power he needed now. Fire in the Sky Gordon L. Dillow 2020-08-04 This

"accessible and always entertaining" (Booklist) combination of history, pop science, and in-depth reporting offers a fascinating account of the asteroids that hit Earth long ago and those streaming toward us now, as well as how prepared we are against asteroid-caused catastrophe. One of these days, warns Gordon Dillow, the Earth will be hit by a comet or asteroid of potentially catastrophic size. The only question is when. In the meantime, we need to get much better at finding objects hurtling our way, and if they're large enough to penetrate the atmosphere without burning up, figure out what to do about them. We owe many of science's most important discoveries to the famed Meteor Crater, a mile-wide dimple on the Colorado Plateau created by an asteroid hit 50,000 years ago. In his masterfully researched *Fire in the Sky*, Dillow unpacks what the Crater has to tell us. Prior to the early 1900s, the world believed that all craters—on the Earth and Moon—were formed by volcanic activity. Not so. The revelation that Meteor Crater and others like it were formed by impacts with space objects has led to a now accepted theory about what killed off the dinosaurs, and it has opened up a new field of asteroid observation that is brimming with urgency. Dillow looks at great asteroid hits of the past and modern-day asteroid hunters and defense planning experts, including America's first Planetary Defense Officer. Satellite sensors confirm that a Hiroshima-scale blast occurs in the atmosphere every year, and a smaller, one-kiloton blast every month. While Dillow makes clear that the objects above can be deadly, he consistently inspires awe with his descriptions of

their size, makeup, and origins. Both a riveting work of popular science and a warning to not take for granted the space objects hurtling overhead, *Fire in the Sky* is, ultimately, a testament to our universe's celestial wonders.

Sky Coyote Kage Baker 2007-11-27 Facilitator

Joseph has outlasted entire civilizations during his twenty-thousand years of service to Dr. Zeus, the twenty-fourth century Company that created immortal operatives like him to preserve history and culture. The year is 1699 and Joseph is now in Alta California, to imitate an ancient Native-American Coyote god, and save the native Chumash from the white Europeans. He has the help of the Botanist Mendoza, who hasn't gotten over the death of her lover Nicholas, in Elizabethan England. Lately though, Joseph has started to have a few doubts about The Company. There are whispers about the year 2355, about operatives that suddenly go missing. Time is running out for Joseph, which is ironic considering he's immortal, but no one ever said that it was easy being a god.
