Worcestershire Regiment in the Great War Vol 1 Capt H. FitzM. Stacke 2013-02-20 Arguably the finest regimental history even written. A magnificent publication it is with its profusion of maps, illustrations and photos - each page of photos contains several. The Worcesters was one of the five regiments that had four regular battalions before the war, with two special reserve and two territorial battalions. By the end of the war another fourteen battalions had been raised for a total of twenty-two of which twelve went on active service. 9,460 officers and men gave their lives, 71 Battle Honours were awarded and eight VCs one of whom, attached to the RFC, was the airman Leefe Robinson, famous for shooting down a zeppelin. Battalions served on the Western Front, in Gallipoli, Macedonia, Mesopotamia, Italy; one battalion ended the war in North Persia. Appendices provide the Roll of Honour; Honours and Awards including Mention in Despatches, with date of Gazette (for 'Companion' of the British Empire read 'Commander'); details of Badges, Colours and Distinctions of the regiment; and the music for regimental marches. Illustrations are by well-known artists depicting battle scenes including each VC-winning action - apart from Leefe's zeppelin. After considering various factors, explained in his very informative preface, the author decided to present this history as one general story in which the number of the battalion concerned is printed in the margin of the pages dealing with its deeds. Attention is paid to minor actions such as trench raids, which usually find no place in compressed official histories; they are recorded in this history. The plans illustrate the engagements recorded in the book, and are designed to depict the part played by the several battalions in their battles and to enable the visitor to the battlefields to recognise the ground on which each fight took place, as much as to make clear the general course of those actions. The book opens with a very interesting account of the regiment in the years before the war, beginning at the turn of the century, and there is a very comprehensive index of 25 pages. This is a great piece of work and must rank as one of the finest of

the Great War regimental histories, many would say the finest, and I wouldn't argue.

Winch and cable systems I. Samset 2013-03-14 The book is a civil engineering handbook on winch and cable systems. The handbook may be used as textbook for university studies in civil engineering and forestry and as the basis for studies in schools on a technical level. It should be a useful reference book for construction engineers, civil engineers, logging engineers, foresters and leaders of operational activities under difficult terrain conditions. The content in the book is based on more than 35 years experience with practical winch and cable operations. As a leader of the Norwegian Institute of Forest Operations, the author has carried out research work in this field since 1947. The Institute is the owner of yarders, winches, cable cranes etc., and with its own cable crews the Institute operates as a contractor in its own research forests as well as in other state or privately owned forests throughout Norway. The research work also includes other cable crane operations in Norway and other countries. As the leader of the Joint FAO/ECE/ILO Study Group on Mechanized Forest Operations the author studied cable operations in most of the Eastern and Western European countries. As president of the International Union of Forestry Research Organizations the author visited most forest countries in the world. Information from research and practical cable crane operations were collected. The handbook is based on material on winch and cable systems used in Japan, New Zealand, Soviet Union, Central Europe, Northern Europe, Eastern United States, Western United States and British Columbia.

Chicago Skyscrapers, 1871-1934 Thomas Leslie 2013-05-15 For more than a century, Chicago's skyline has included some of the world's most distinctive and inspiring buildings. This history of the Windy City's skyscrapers begins in the key period of reconstruction after the Great Fire of 1871 and concludes in 1934 with the onset of the Great Depression, which brought architectural progress to a standstill. During this time, such iconic landmarks as the Chicago Tribune Tower, the Wrigley Building, the Marshall Field and Company Building, the Chicago Stock Exchange, the Palmolive Building, the Masonic Temple, the City Opera, Merchandise Mart, and many others rose to impressive new heights, thanks to innovations in building methods and materials. Solid, earthbound edifices of iron, brick, and stone made way for towers of steel and plate glass, imparting a striking new look to Chicago's growing urban landscape. Thomas Leslie

reveals the daily struggles, technical breakthroughs, and negotiations that produced these magnificent buildings. He also considers how the city's infamous political climate contributed to its architecture, as building and zoning codes were often disputed by shifting networks of rivals, labor unions, professional organizations, and municipal bodies. Featuring more than a hundred photographs and illustrations of the city's physically impressive and beautifully diverse architecture, *Chicago Skyscrapers, 1871-1934* highlights an exceptionally dynamic, energetic period of architectural progress in Chicago.

Knowledge-based Intelligent Information and Engineering Systems Ignac Lovrek 2008-08-18

Delegates and friends, we are very pleased to extend to you a warm welcome to this, the 12th International Conference on Knowledge-Based and Intelligent Information and Engineering Systems organised by the Faculty of Electrical Engineering and Computing at the University of Zagreb, in association with KES International. For over a decade, KES International has provided an annual wide-spectrum intelligent systems conference for the applied artificial intelligence research community. Having originated in Australia and been held there during 1997-99, the conference visited the UK in 2000, Japan in 2001, Italy in 2002, the UK in 2003, New Zealand in 2004, Australia in 2005, the UK in 2006, Italy in 2007, and now in Zagreb, Croatia in 2008. It is planned that KES 2009 will be held in Santiago, Chile before returning to the UK in 2010. The KES conference is - ture and regularly attracts several hundred delegates. As it encompasses a broad range of intelligent systems topics, it provides delegates with an opportunity to mix with researchers from other groups and learn from them. The conference is linked to the International Journal of Intelligent and Knowledge-Based Systems, published by IOS Press under KES editorship. Extended and enhanced versions of the best papers presented at the KES conference may be published in the Journal. In addition to the annual wide-range intelligent systems conference, KES has run successful symposia in several specific areas of the discipline. Agents and Multi-Agent Systems is a popular area of research.

Finite Elements for Analysis and Design J. E. Akin 2014-06-28 The finite element method (FEM) is an analysis tool for problem-solving used throughout applied mathematics, engineering, and scientific computing. *Finite Elements for Analysis and Design* provides a thoroughly revised and up-to-date account of this important tool and its numerous applications, with added emphasis on basic theory. Numerous worked examples are included to illustrate the material. Akin clearly explains the FEM, a numerical analysis tool for problem-solving throughout applied mathematics, engineering and scientific computing. Basic theory has been added in the book, including worked examples to enable students to understand the concepts. Contains coverage of computational topics, including worked examples to enable students to understand concepts. Improved coverage of sensitivity analysis and computational fluid dynamics. Uses example applications to increase students' understanding. Includes a disk with the FORTRAN source for the programs cited in the text.
